

## **INS Arihant Launch - Strengthening India's Nuclear 'Triad'**

### **What is the issue?**

\n\n

\n

- India's first nuclear propelled submarine, INS Arihant, was recently announced to be operationally ready.

\n

- With Pakistan's India-aimed nuclear doctrine and China's ambiguity, India needs to boost its nuclear arsenal.

\n

\n\n

### **What is India's nuclear vision?**

\n\n

\n

- India earlier had the capabilities to launch nuclear weapons from the air, mounted largely on its Mirage 2000 and Jaguar Aircraft.

\n

- The similar land based missile range from Agni 1 missile (range of 700-900 km) to Agni 5 Missiles (range of 5500 km).

\n

- India's aim has been to develop a "credible nuclear deterrent" with capabilities to deliver nuclear weapons from multiple locations on land, air and sea.

\n

- The targets are all strategic areas and centres in India's two nuclear-armed neighbours - China and Pakistan.

\n

\n\n

### **Why is INS Arihant significant?**

\n\n

\n

- The Arihant provides India with a capability to hit either neighbour (China, Pak) from 300 meters under the sea.

\n

- The sea-based missiles envisaged for this purpose are

\n

\n\n

\n

- i. the Sagarika with a range of 750 km

\n

- ii. the K-4 with a range of 3500 km

\n

\n\n

\n

- While land-based missile sites can be attacked and destroyed, a submarine-based deterrent is virtually secure against a missile attack.

\n

- India is the only country having a sea-based nuclear deterrent, which is not a Permanent Member of the UN Security Council.

\n

- India will soon operationalise a second nuclear submarine the “Arighat”.

\n

- It is expected to have a fleet of four such submarines by 2022.

\n

- According to US Federation of Nuclear Scientists, India currently possesses 130-140 nuclear weapons, Pakistan 140-150 and China 280.

\n

- While India tested its first nuclear weapons in 1998, Pakistan’s first weapons test was in 1990, on Chinese soil.

# Deadly Deep Sea Hunter

## THE ARIHANT

Subma-  
rine to be  
a 6,000  
ton class  
boat

TWO MORE ARIHANT class submarines under construction

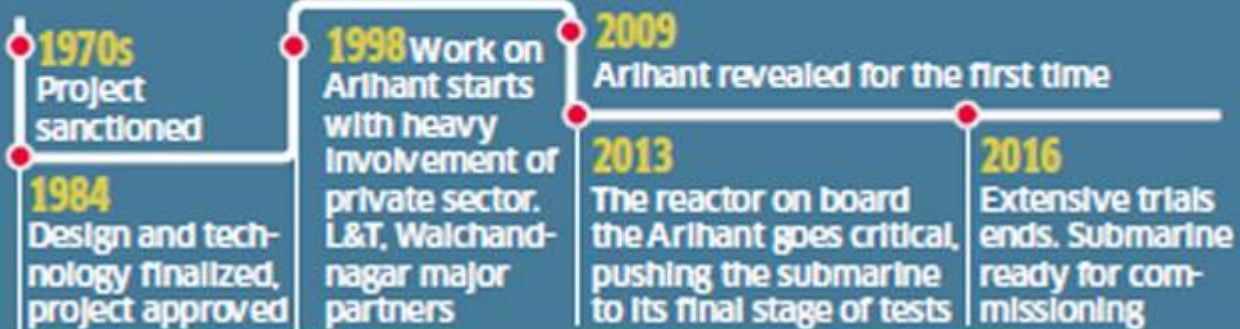

ARMED WITH 12 SHORT  
range K-15 missiles (700  
km) or four K-4 ballistic  
missiles (3,500 km)

CAN LAUNCH NUCLEAR weapons  
from underwater completing the  
nuclear trial - the ability to launch a  
nuclear strike from land, air or sea

Russian Navy vessel RFS Epron accompanying the Arihant on deep sea dives and launch tests

## THE LONG JOURNEY

\n\n

## What are the countries' nuclear principles?

\n\n

\n

- **India** - India's nuclear doctrine stated that its nuclear weapons would only be used in retaliation.

\n

- It could be against a major attack on Indian territory or on Indian forces anywhere, in which nuclear weapons are used.

\n

- India also retains the right to use nuclear weapons in the event of major attacks in which chemical or biological weapons are used.

\n

- **Pakistan** - Pakistan, on the other hand, does not have a formal nuclear doctrine.

\n

- However as stated before by its officials, Pakistan’s nuclear weapons are “aimed solely at India”.  
\n
- Accordingly, Pakistan would use nuclear weapons if India conquers a large part of its territory, or destroys a large part of its land and air forces.  
\n
- The possibility of nuclear weapons use if India tries to “economically strangle” Pakistan, or pushes it to political destabilisation also exists.  
\n
- Pakistan’s statements in recent years have, however, indicated that it would not be averse to using tactical nuclear weapons in a conventional conflict with India.  
\n
- **China** - China, like India, had proclaimed that it would not be the first to use nuclear weapons.  
\n
- But China has maintained a measure of ambiguity on whether its “no first use” pledge will be applicable to India.  
\n
- China's deliberate maintenance of this ambiguity is seen as a signal of its support to Pakistan on any of its nuclear exchange with India.  
\n
- Chinese ambiguity only adds to India’s determination to strengthen its “Triad” of land, air and sea-based nuclear weapons.  
\n

\n\n

## **What is China's role in Pakistan?**

\n\n

- It is said that the Chinese did a massive training of Pakistani scientists.  
\n

\n\n

- Without China’s help, Pakistan’s bomb would not exist.  
\n
- China has also provided Pakistan the designs of its nuclear weapons.  
\n
- It upgraded Pakistan's “inverters” for producing enriched uranium in Kahuta.  
\n
- It provided it with Plutonium reactors and separation facilities, for building

tactical nuclear weapons.

\n

- Pakistan's ballistic and Cruise Missiles are also replicas of Chinese missiles.

\n

\n\n

## **What are the bureaucratic shortcomings in India?**

\n\n

\n

- India has a well-organised nuclear command structure headed by the Prime Minister and Cabinet Committee on Security.

\n

- However, India needs to address serious issues on the archaic structure of the Ministry of Defence.

\n

- E.g. the key military figure in the Nuclear Command structure, the Chairman of the Joint Chiefs of Staff Committee, generally holds office for less than a year

\n

- This is hardly the time adequate to become fully familiar with the complexities of India's Strategic Nuclear Command.

\n

- There have been repeated proposals for appointment of a full time "Chief or Defence Staff", or "Chairman Chiefs of Staff Committee".

\n

- S/he will hold charge of the Nuclear "Strategic Forces Command" and report to the political authority.

\n

- But the proposals have gathered dust for years in the offices of the generalist bureaucracy of the Defence Ministry.

\n

- Recommendations for such change even from the Parliament Standing Committee of Defence lie unimplemented.

\n

\n\n

\n

- The present set up of the Defence Ministry thus needs to be drastically reorganised.
