

Actual Economic Scenario

What is the issue?

\n\n

\n

- Various estimates appreciate Indian economic growth, but the real performance of the economy is not so optimistic.

\n

- Corrective steps are needed to recover momentum in industrial growth

\n

\n\n

What do recent estimates on economy signify?

\n\n

\n

- World Bank Group's Doing Business 2018 report ranked India at 100 out of 190 countries.

\n

- The global rating agency Moody's has upgraded India's Sovereign bond rating. Click [here](#) to know more

\n

- The ratings by Moody's are based on its assessment of the trajectory of governments' abilities to service their debt over time.

\n

- The higher rating for India signals a lower risk grade for the government's debt and can lower the cost of raising it.

\n

- The improvements reflect the increased attractiveness of India to investors.

\n

\n\n

What is the actual growth scenario?

\n\n

\n

- The Index of Industrial Production (IIP) which represents non-agricultural production, investment and consumption in the economy, for April through

September does not present a pretty picture.

\n

- Estimates on the industrial output is also bad, the growth rate weakened to 2.5%, which was 5.8% a year ago.
- \n
- On the manufacturing front, the growth rate was 1.9%, pale when compared to 6.1% a year ago.
- \n
- In infrastructure and construction the growth rate 2%, is feeble compared to 4.9% in the first half of last year.
- \n
- Even though the investment climate remains soured, the conditions do not seem conducive for job creation.
- \n
- The industrial performance this year so far is so tepid that it is weaker than it had been in 2012-13.
- \n
- Exports are declining, which is sharper in the employment-intensive sectors of leather, gems, jewellery, handicrafts, readymade apparel and carpets.

\n

\n\n

What are the reasons for the declining trend?

\n\n

\n

- Exporters blame the break in the trend on a liquidity crunch owing to the infirmities in the goods and services tax (GST) system.
- \n
- And there are also complains that exporter's refund claims were not released for four months.
- \n
- Smaller firms with limited access to working capital have taken a body blow.
- \n
- If demonetisation led to demand destruction, the GST rollout has had disastrous effects on the supply side.
- \n
- The twin shocks have compounded the problems of industry, big and small, that was already struggling with a slowdown.
