

Addressing Hunger

What is the issue?

\n\n

\n

- International Food Policy Research Institute (IFPRI) has recently released the Global Hunger Index (GHI) report. Click [here](#) to know more on the report.

\n

- It calls for a review of India's approach to food security in the recent years.

\n

\n\n

How has India's record been?

\n\n

\n

- India's relative rank among the countries deteriorated between 2008 and 2011; but the score remained more or less the same.

\n

- India's relative rank and score improved significantly between 2011 and 2014;

\n

- However there has been a significant **decline in the score since 2014**.

\n

- An observation of the period between 2006 and 2016 reveals that there has been progress in many dimensions:

\n

\n\n

\n

- i. as a proportion, stunting among children has declined.

\n

- ii. anaemia among women of reproductive age has declined.

\n

- iii. low birth weight has declined.

\n

- iv. exclusive breastfeeding has improved.

\n

\n\n

\n

- But the concern is that **wasting** among children had **worsened**.
- None of the states in India reached acceptable levels of wasting in 2016, based on the WHO cut-off rates for public health significance.

\n

\n\n

Why is the dip after 2014?

\n\n

\n

- The most decisive intervention in this regard was the passing of the National Food Security Act, 2013 (NFSA).
- The NFSA declared entitlements to food grains every month at subsidised prices. Under this -

\n

\n\n

\n

- i. Every person in a 'priority household' will be entitled to 5 kg of food grain.
- ii. Every 'Antyodaya' household gets 35 kg of food grain.
- iii. Every pregnant woman or lactating mother is entitled to a daily free meal during pregnancy and for six months after childbirth, plus Rs 6,000.
- iv. Every child under six years is entitled to a daily free meal.
- v. Every child between 6 and 14 years gets a free mid-day meal.

\n

\n\n

\n

- It was intended to cover around 75 % of the rural population and 50 % of the urban population.
- A State Commission would oversee the implementation of the Act in each state.
- Despite this, studies and observations suggest that when the government changed in 2014, **NFSA was gravely neglected**.

- \n
- Nor was an alternative proposed for the food security mission.
- \n
- There is a **decline in the government expenditure** figures in this regard over the last few years.
- \n
- Also there is a huge **gap between revenue estimate and the actual expenditure**, suggesting further neglect in implementation.
- \n
- Recently the Supreme Court also noted that State Commissions charged with implementation had not even been set up.
- \n

\n\n

What should be done?

\n\n

- \n
- Governments must take serious attention of India's position in global hunger index and device a comprehensive solution to address the woes of hunger.
- \n
- Also proper governmental mechanisms should be put in place to ensure its fair and effective implementation.
- \n
- Besides, ideas like that of the Food Safety and Standards Authority of India (FSSAI) could be of help.
- \n
- FSSAI plans for the Indian Food Recovery Alliance (Ifra) as a portal to facilitate recovery and distribution of leftover food.
- \n
- It acts as the aggregator where NGOs already working to feed the needy by collecting leftover food can meet volunteers and donors on one platform.
- \n
