

America's new Trade Policy agenda 2017

Why in news?

\n\n

America had released a new Trade Policy Agenda 2017, which sets to identify and crack down on such trade partners with whom the US runs a big trade deficit, and force them to shrink it.

\n\n

What is a trade deficit?

\n\n

\n

- Trade deficit is the excess of a country's import bill over its export receipts.

\n

- e.g The US trade deficit of \$502 billion in 2016 means that the country spent \$502 billion more on importing goods and services from other countries last year, than it earned by exporting.

\n

\n\n

\n

- US Trade Deficit with other countries

\n

\n\n

\n

1. China - \$300 billion

\n

2. Germany - \$68 billion

\n

3. Mexico - \$62 billion.

\n

4. India - \$30 billion.

\n

\n\n

- \n
- The US is hoping that by imposing high import tariffs on trade partners who run a large deficit with it, it can force global manufacturing giants to relocate their factories back to its shores.
- \n
- By putting pressures on countries such as China and India to dismantle their import barriers, it can also access new markets for American goods and services thereby reducing its trade deficit.
- \n

\n\n

What is the trade deficit for India?

\n\n

- \n
- India runs a trade deficit, with its import bill on crude oil, precious metals, electronic goods and other items, far exceeding its export earnings.
- \n
- In April to December 2016, India's trade deficit was \$76 billion.
- \n
- Just like the US, India too is keen to shrink its trade deficit, especially the one with China.
- \n

\n\n

Why is trade deficit important?

\n\n

- \n
- Running a persistent trade deficit has following adverse effects on the economy.
- \n
- The country's demand for dollars (foreign exchange) will be greater than the supply. This leads to steadily weakening home currency i.e depreciation.
- \n
- It forces a country to constantly look to foreign investors to make up the gap between its export earnings and its import payouts.
- \n
- It could be an indication that domestically produced goods are unable to compete against imports. If local factories shut down, that leads to job losses.
- \n

\n\n

What is the effect of US agenda on India?

\n\n

- \n
- US is one of the few countries with which India runs a trade surplus.
\n
- A reversal of this trade balance could trouble the exchange rate.
\n
- India's exporting and importing sectors will face new hurdles.
\n
- The Indian software professionals in US are already on the verge of getting expelled from US due to the recent H1B visa issue.
\n
- Exporters of agri-commodities, textiles and apparel are soon likely take a hit.
\n
- It is also not good for India's young population looking for jobs.
