

Annual Status of Education Report (ASER) - 2018

Why in news?

\n\n

Annual Status of Education Report 2018, released recently, finds some improvements in primary education.

\n\n

What is the background?

\n\n

\n

- The Annual Status of Education Report (ASER) is being released by a non-governmental organisation Pratham since 2005.

\n

- Each year's report has been presenting a dismal picture of primary education in India.

\n

- The reports focus on children aged between 6 years and 14 years in rural India.

\n

- It maps the schooling status of and the impact of primary education on a child's ability to complete basic reading and arithmetic tasks.

\n

- Despite enacting Right to Education in 2010, which has mandated free and compulsory education for each child between the age of 6 and 14 years, learning outcomes remained poor.

\n

\n\n

What does the latest report reveal?

\n\n

\n

- For the first time since India adopted RTE, reading abilities of Class V students in government schools have improved and their basic mathematical abilities have started growing faster.

\n

- For instance, the proportion of government school students in Class V, who can read a Class II-level text has risen from 41.7% in 2016 to 44.2% this year.
- This ratio had been declining from 53.1% in 2008.
- Similarly, 27.3% of students in Class III can now read a Class II text, up from 21.6% in 2013.
- India has also moved further ahead on gender parity, wherein the proportion of girls in the age group of 11-14 years who stayed out of school declining from 6% in 2010 to 4.1% in 2018.
- Moreover, it is the first time that the proportion of children not enrolled in schools has fallen below 3%.
- Also, among states, the reading ability among Class V students in Kerala jumped 10 percentage points in 2018 from that in 2016.

The ABCs of the report

► Only **50.3%** of all Class V students can read texts meant for Class II

► Reading ability among such students has **jumped 10 percentage points** in Kerala, 8 percentage points in Himachal Pradesh and 7 percentage points in Chhattisgarh and Odisha since 2016

► The learning deficit is prevalent across **government and private schools**

► The percentage of private school enrolment in 6-14 age group has been around **30%** in the last five years

► The dependence on private schools is much higher than the national average in states such as **Manipur** (70.4%) and **Haryana** (55.3%)

► Over 180 million students are in elementary schools; adding secondary levels, the figure is **240 million**

- In Himachal Pradesh, the growth is nearly 8 percentage points and in Chhattisgarh and Odisha it is around 7 percentage points between 2016 and 2018.
- Still, data from states such as Jharkhand, West Bengal, Gujarat, Rajasthan and Tamil Nadu shows a marginal dip in the same criterion for the same

cohort.

\n

\n\n

What are the concerns?

\n\n

\n

- Despite these developments, the broader trend is still worrying.
- The basic reading and mathematics abilities of children in Class VIII continue to slowly decline.
- For instance, among Class VIII students attending government schools, the proportion that can read a Class II text has continued to decline from 83.6% a decade ago to 69% in 2018.
- The proportion is similar when it comes to mathematical abilities.
- The picture is slightly more encouraging at the Class III level, where there has been gradual improvement since 2014.
- However, even in 2018, less than 30% of students in Class III are actually at their grade level, that is, able to read a Class II text and do double-digit subtraction.
- The performance in private schools is better than government schools.
- In fact, in private schools, reading and mathematical abilities for students in both Class V and Class VIII have shown improvement.
- However, the performance difference is not great as learning deficit is present across both government and private schools.
- Traditionally, students in private schools have fared better than their government school counterparts, but that's a relative situation.
- For example, while 40% of Class VIII students in government schools can do simple division, the figure is only 54.2% in private schools.
- Private school students are believed to have better family background, both in economic and education front, which serves as a key differentiator.
- This means the improvements in educational achievements are not broad-

based.

\n

- In particular, higher primary (class VI to Class VIII) have not shown enough improvements.

\n

- Thus, the report shows the prevalence of learning deficit and the poverty of basic reading and arithmetic skills among students in Indian schools.

\n

\n\n

Why is learning level in schools important?

\n\n

\n

- The quality of the learning level bears directly on India's future workforce, its competitiveness and the economy.

\n

- India's demographic dividend depends on the learning level of students.

\n

- Since children at the higher primary level is closest to joining the labour market or the next level of education, they need adequate foundational skills such as literacy and numeracy.

\n

- Thus, it can be revealed from the latest report that India continues to stare at a crisis and hence need concerted efforts to be taken at the earliest.
