

## **Arrest of Huawei's Executive - US-China Tech Trade War - II**

Click [here](#) to know more on the issue

\n\n

### **What is the global response?**

\n\n

\n

- The recent arrest in Canada of the chief financial officer of Huawei has created a fresh flashpoint between the United States and China.

\n

- It reveals that fresh attention is being paid to the mechanisms of, as well as the implications of, Chinese technological leadership.

\n

- Many of the five eyes countries (Australia, Canada, New Zealand, UK and US) have imposed restrictions on Huawei and its compatriots in the same industry, such as ZTE.

\n

- The Government of Japan has also moved to prevent these companies from dominating the fifth-generation telecom rollout domestically.

\n

\n\n

### **What are the lessons for India?**

\n\n

\n

- India is a leading player in the consumption and use of new technology.

\n

- The commercial rollout of 5G is expected to take place in India in 2020.

\n

- The Indian government has invited Huawei to be a part of 5G trials in the country.

\n

- Early this year, Huawei also conducted 5G trials in laboratory with Bharti Airtel in India.

\n

- However, it is important for the government to ensure that there is

transparency about national security as well as the commercial interests at stake in this and similar cases.

\n

- The dangers of permitting state-linked companies such as Huawei to become the primary guarantors of the effectiveness of India's telecom backbone are real, and should be avoided.

\n

- Also, India's protections against breaches in the high-tech, telecom and cyber domain need urgent review.

\n

- It is far from clear that there is sufficient capacity or awareness about the degree to which Indian systems can be or have already been penetrated.

\n

- Stress testing is used to test the stability & reliability of the system.

\n

- This test mainly determines the system on its robustness and error handling under extremely heavy load conditions.

\n

- It is not clear whether stress tests have been run or simulated to determine the stability of India's technological framework in the event of various geopolitical crises.

\n

\n\n

## **What should be done?**

\n\n

\n

- Technological infrastructure is crucial in the 21st century and should be an important part of security preparedness and theorising.

\n

- Thus, the government could consider coming out with a white paper establishing its strategy in this respect, similar to the one on data protection.
