

Behavior change for Universal Health

What is the issue?

\n\n

\n

- WHO commemorates this year's World Health Day (April 7) with the theme “Universal Health Coverage: Everyone, Everywhere”.

\n

- It is essential to understand at this point that healthcare policies incorporate the behavioural component in it.

\n

\n\n

What are the concerns?

\n\n

\n

- Health clinics that are accessible and affordable still go unutilised in rural and under-served people.

\n

- Behavioural patterns, old traditions, conventional beliefs, and habits have a strong hold on people.

\n

- There is a long entrenched practice of going to untrained and unqualified doctors.

\n

- There is evidently a lack of trust on existing scientific healthcare models.

\n

- All these in turn affect the success of healthcare efforts.

\n

\n\n

What is desired?

\n\n

\n

- The low turnout witnessed at health outlets call for a shift in the approach.

\n

\n\n

\n

- It takes concerted efforts to address this which include:

\n

\n\n

\n

- i. breaking various myths
- ii. sharing continued education and awareness
- iii. rendering door-to-door services especially for women and child care

\n

\n\n

\n

- Notably holding camps and reaching out to the villages proved to be more effective.

\n

- It triggered a change in the behavioural patterns of the villagers who began trusting a scientifically sound model.

\n

- They started moving away from the traditional practices.

\n

\n\n

What should policies aim for?

\n\n

\n

- Modifying individual behaviour is essential for the success of any public policy promoting health awareness and healthcare delivery.

\n

- Effective people participation and engagement is significant.

\n

- More interactive health policies are likely of developing public understanding, appealing to a larger consciousness and modifying habits.

\n

- The health models need to be thought-out and viewed from public behavioural psychology during inception and while being drafted.

\n

- Social media, digitisation, tele-assisted medicine, video and audio campaigns can play a significant role in reaching out to people.
