

## **Big Data for Better Governance**

### **What is the issue?**

\n\n

\n

- Collaborative federalism with focus on balanced regional development is a prime objective of the Niti Aayog.

\n

- Effective use of big data analytics is called for, for making this developmental objective more meaningful.

\n

\n\n

### **What is the need?**

\n\n

\n

- There is a notable information asymmetry at various administrative levels.

\n

- This is evidently hampering the targeting of various government measures and keeps the outcomes largely undermined.

\n

- There are entities that have outlived their utility and others that use outdated systems and processes.

\n

- This has to be eliminated and existing legacy systems need to be analysed with clear data points.

\n

- The UN, by a resolution on official statistics, expects India to produce quality statistics.

\n

- The purpose is to shed enough light on the true picture of material and human resources and the needs and demands of the societies.

\n

\n\n

### **What should be done?**

\n\n

\n

- **Data** - Statistics must be offered as a public good for the government, enterprises and the general public.

\n

- The big data analytic centres do have micro data, geo-coded, along with tools for extraction of relevant information.

\n

- There has to be a quantitative analysis on all these.

\n

- There is also the need for devising a formula for aggregation of data to enforce a code of practice.

\n

- **Area of focus** - Health, education and demography are the significant and demanding areas in this regard.

\n

- Web-based reporting for timely collection, collation and dissemination should be taken up.

\n

- Segregating the data under different socio-economic heads would facilitate making appropriate response for concerns in each of them.

\n

- **Localisation** - Data at the district level would enable understanding the true picture at the ground level.

\n

- The impact of developmental schemes gets captured at the smallest administrative level.

\n

- This would be supportive for better implementation of policy initiatives and making course corrections.

\n

- **Organisation** - Establishing such a massive data pipeline is indeed highly challenging.

\n

\n\n

\n

- It should thus be ensured that data once captured are handled in an organised fashion.

\n

- These are essential for making the developmental initiatives meaningful.
