

# **Big Data for Better Governance**

#### What is the issue?

 $n\n$ 

\n

- Collaborative federalism with focus on balanced regional development is a prime objective of the Niti Aayog.
- $\bullet$  Effective use of big data analytics is called for, for making this developmental objective more meaningful. \n

 $n\$ 

#### What is the need?

 $n\n$ 

\n

- $\bullet$  There is a notable information asymmetry at various administrative levels.
- This is evidently hampering the targeting of various government measures and keeps the outcomes largely undermined.
- There are entities that have outlived their utility and others that use outdated systems and processes.
- This has to be eliminated and existing legacy systems need to be analysed with clear data points.
- The UN, by a resolution on official statistics, expects India to produce quality statistics.
- The purpose is to shed enough light on the true picture of material and human resources and the needs and demands of the societies.

 $n\n$ 

\n

### What should be done?

 $n\n$ 

\n

• **Data** - Statistics must be offered as a public good for the government, enterprises and the general public.

۱n

• The big data analytic centres do have micro data, geo-coded, along with tools for extraction of relevant information.

\n

- $\bullet$  There has to be a quantitative analysis on all these.  $\ensuremath{^{\backslash n}}$
- There is also the need for devising a formula for aggregation of data to enforce a code of practice.

\n

• Area of focus - Health, education and demography are the significant and demanding areas in this regard.

۱n

• Web-based reporting for timely collection, collation and dissemination should be taken up.

\n

- $\bullet$  Segregating the data under different socio-economic heads would facilitate making appropriate response for concerns in each of them. \n
- **Localisation** Data at the district level would enable understanding the true picture at the ground level.
- The impact of developmental schemes gets captured at the smallest administrative level.

۱n

\n

- This would be supportive for better implementation of policy initiatves and making course corrections.
- **Organisation** Establishing such a massive data pipeline is indeed highly challenging.

\n

 $n\n$ 

\n

• It should thus be ensured that data once captured are handled in an organised fashion.

\n

 $\bullet$  These are essential for making the developmental initiatives meaningful.  $\ensuremath{\backslash n}$
