

Black Kite

Why in News?

Recently, an article suggested that black kites have nesting habitats at a tower structure in Chennai.

- **Black Kite** - It is a bird of prey and a **migratory bird** extends to an extremely large range of habitats.
- **Scientific Name** - *Milvus migrans*.
- It is often called **Fork-Tailed Kites**.
- **Habitat** - Close access to water bodies such as rivers, ponds, lakes, and wetlands, woodlands, grassland and open savannas.
- **Distribution** - Tropical portions of Australasia, Eurasia, and Africa.
- **Morphology** - Medium-sized raptors, dorsal, ventral and tail color is brown with darker brown striped feathers within.
- It has small, bead-like dark brown eyes and a large black, hook-shaped beak, long black talons and pale-yellow legs.

- **Sexual dimorphism**
 - **Female** - It has a slightly **larger body size than males**, though they feature similar coloration.
- **Characteristic** - It typically lives in social groups.
- It migrates from Europe and northern Asia wintering in sub-Saharan Africa and southern Asia.
- It has well developed intraspecific communication and very loud vocalizing.
- **Diet** - An extremely **versatile feeder**, it takes carrion, birds, mammals, fish, lizards, amphibians, invertebrates and forage on vegetable matter such as palm oil fruits.

- **Threats** - Poisoning
 - Shooting
 - Electrocution by power lines
 - Pollution of water by pesticides and other chemicals
 - Vulnerable to the effects of wind energy development.
- **Conservation Status**
 - **IUCN** - Least Concern.
 - **CITES** - Appendix II.
 - **Wild Life Protection Act, 1972** - Schedule-II.
