

## Challenges in UDAN scheme

### What is the issue?

\n\n

Though UDAN scheme aims to boost airport connectivity and air traffic, a lot more needs to be done in its implementation phase.

\n\n

### What is the UDAN scheme?

\n\n

\n

- The scheme UDAN envisages providing connectivity to un-served and under-served airports of the country through revival of existing air-strips and airports.

\n

- UDAN has a unique market-based model to develop regional connectivity.

\n

- Interested airline and helicopter operators can start operations on hitherto un-connected routes by submitting proposals to the Implementing Agency.

\n

- The operators could seek a Viability Gap Funding (VGF) apart from getting various concessions.

\n

- All such route proposals would then be offered for competitive bidding through a reverse bidding mechanism and the route would be awarded to the participant quoting the lowest VGF per Seat.

\n

- The successful bidder would then have exclusive rights to operate the route for a period of three years.

\n

- Since the scheme also capped the price of half the inventory of seats, airfares would remain affordable.

\n

- A Regional Connectivity Fund would also be created to meet the viability gap funding requirements under the scheme.

\n

\n\n

\n

- Additionally, there would be certain tax concessions in ATF fuel from both the Centre and the states and waivers of landing charges from airport operators.

\n

- Thus, the UDAN scheme is likely to give a major fillip to tourism and employment generation in the hinterland.

\n

\n\n

## What are the challenges?

\n\n

\n

- **Infrastructure** - Building a greenfield airport isn't enough, unless flights are able to take off and land.

\n

- Inclement weather conditions make it difficult for flights to land on the airports located on mountainous terrains on most days.

\n

- Also, lack of instrument landing systems (ILS) lead to flight cancellations and the repeated cancellations make it difficult to build traffic on the route on a sustained basis.

\n

- **Traffic route** - While the infra challenge might be easier to fix, the bigger challenge is putting in place an ideal network design.

\n

- Thus, the key is to discover routes where there is sustained traffic, not just in a few months of the year, but all round the year.

\n

- To generate steady, predictable traffic, a hub and spoke design should be followed by connecting the large metro airports to the new Udan routes, as opposed to a point-to-point service.

\n

\n\n

\n

- **Capacity** - India's metro airports are largely choked and they have already run out of capacity in terms of landing and parking slots.

\n

- Also, passenger traffic in these airports continues to gallop at nearly 18-20% every year.

\n

- To manage these traffic, the existing airlines have responded by ordering aircraft that could almost double the existing aircraft capacity in another three years.  
\n
- This will stretch India's airport capacity in the metros even further.  
\n
- Though the Udan routes was intended to help manage this traffic flow from metro routes, it affects more from this rise in air traffic.  
\n
- This is because, the airport operators are expected to waive off landing and parking charges on these routes and thus more airlines are expected to ply on these routes.  
\n
- **Time slots** - Subsequently, finding convenient time slots for every route will become an administrative challenge.  
\n
- This is because, the number of runways is not increasing in high traffic airports and the airport capacity lag the passenger traffic growth.  
\n
- Especially, the new regional airlines have faced a major challenge in connecting the metro airports to the new Udan routes, since they don't have pre-existing slots in them.  
\n
- This has made these regional operators difficult to start operations for more than a year, which has also resulted in their licenses getting stripped off later.  
\n
- Thus, managing air traffic is a complex problem to solve, showing that UDAN has a long way to go ensure seamless connectivity in India.
