

Challenges to NHPS Scheme

What is the issue?

\n\n

\n

- Government had proposed its ambitious “National Health Protection Scheme” (Ayushman Bharat) to insure the masses of India for medical expenses.

\n

- But various challenges in the sector need to be ideated upon prior to implementing the scheme for ensuring effectiveness.

\n

\n\n

What is NHPS?

\n\n

\n

- National Health Protection Scheme (NHPS - Ayushman Bharat), was announced in the 2018 union budget.

\n

- While the initiative is clearly a hurried one for political reasons, it is nevertheless welcome as the crisis in the health sector is stark.

\n

- NHPS has two objectives - to enhance the health of the population and reduce the financial risk for those accessing treatment.

\n

- Success in the first is measured by a reduction in the disease burden and subsequent increase in people’s longevity.

\n

- The 2nd is to be measured by the extent of affordability of our health systems to the downtrodden and the most marginalised.

\n

- The components of the scheme are

\n

\n\n

\n

- Upgrading the 150,000 sub-centres by enhancing their services.

- \n
- Providing health security (5 lakh insurance) to 40% of the population.

\n

\n\n

\n

- If implemented as integral components, these initiatives can help achieve the goals of equity, efficiency and quality in health services.

\n

\n\n

What are the challenges?

\n\n

\n

- **Supply Side** - There is a massive shortage of health services (human resources, hospitals and diagnostic centres in both private and public sector).

\n

- This is made worse by gross inequalities between and within States.

\n

- But significantly, even a well-placed State like Tamil Nadu has an over 30% shortage of medical and non-medical professionals in government facilities.

\n

\n\n

\n

- Notably, the health budget has neither increased nor is there any policy to strengthen the public/private sector in deficit areas.

\n

- While the NHPS provides portability, it will take time for private entities to register hospitals and expand their area of operations to deficit areas.

\n

- **Demand Side** - The stark regional variations in health care infrastructure across states could cause patients to gravitate toward the southern States.

\n

- Growth of medical tourism (foreign patients) as a government policy is another area that is already creating significant demand.

\n

- The capacity of this infrastructure to take on the additional load of such insured patients from other States is very doubtful.

\n

\n\n

\n

- **Pricing** - Pricing strategy for health services under the scheme needs to be spelt out clearly as this area had proved controversial in other health too.
\n
- Notably, erratic profiteering by hospitals has been discovered under various state government sponsored insurance schemes thus far.
\n
- Mechanisms are needed to put in place to gather market intelligence and arrive at accurate pricing for medicines and medical procedures.
\n
- **Primary Care** - There is a proposal for upgrading primary care, but the claim seems hollow as no funding has been allocated for the same.
\n
- In the northern States there are hardly any sub-centres and primary health centres are practically non-existent.
\n
- It is estimated that Rs. 30,000 crore will have to be spent if this three-tier primary health-care system is to be brought to minimal health standards.
