

## **Changes in Shooting Sport**

#### Why in news?

 $n\n$ 

International Olympic Committee's (IOC) proposed to make ranges across the world bullet-free by introducing laser shooting.

 $n\n$ 

#### What is 'laser shooting'?

 $n\n$ 

\n

• The sport of shooting currently has three disciplines—Rifle, Pistol and Shotgun.

۱n

- The shooters use either real bullets or pellets.
- If the change is forced, then the pistols and rifles used by sports shooters will fire laser beams at the targets instead of bullets.
- The IOC's proposal is to bring this change only in Rifle and Pistol events for the time being.

 $n\n$ 

## Why is IOC proposing the change?

 $n\n$ 

۱'n

- **Appeal** The most important reason is to make shooting more appealing to millennials, whose support and interest all sport needs to survive.
- $\bullet$  Shooting flashy red beams will make the sport attractive and fashionable and engage a wider audience.  $\mbox{\sc h}$
- The change will also make shooting television-friendly.

• **Gun control norms** - It will also take care of the complications involved in carrying weapons and ammunition by shooters while travelling from one country to another. This requires a lot of paperwork and clearances. e.g IOC faced a lot of trouble in getting these aspects sorted during the 2012 London Olympics because of the strict gun laws in the United Kingdom.

\n

• Environment - Another important issue is that shooting at present is **not** completely environment-friendly.

\n

 $n\n$ 

\n

\n

- The bullets that the shooters use are made of lead, which gets into the atmosphere every time a shot is fired.
- $\bullet$  The chemical can potentially have an adverse effect on the nervous system as well. Thousands of bullets are used at each shooting range every day. \n

 $n\n$ 

#### What was the reaction to the move?

 $n\$ 

\n

• The ISSF insist the sport will not change and have conveyed this to the IOC.

\n

- Shooters are also not excited about laser shooting.
- But most of them do seem resigned to the fact that the change will eventually take place.

\n

 $n\n$ 

\n

- They feel that the basic fabric of the sport will be impacted.
- The ISSF says that laser technology is as yet not developed to the level where it can create the same environment during competitions as real bullets.

\n

• Shooters say that shooting involves a lot of intangibles like wind speed.

Lasers will take those away and make the sport too literal and predictable.  $\label{eq:lasers}$ 

 $n\n$ 

\n

• The biggest difficulty for governing bodies will be to fight the weapons lobby to bring the change.

\n

 $\bullet$  This is a multi-million dollar industry, which will be directly impacted if the sport moves from bullets to lasers.  $\mbox{\ \ }\mbox{\ \ }\mbox{\$ 

 $n\n$ 

### Why should India be worried?

 $n\n$ 

\n

• Shooting is one of the few Olympic sports in which India has consistently done well.

\n

 $\bullet$  Such a fundamental change would undoubtedly severely impact the country's prospects.  $\ensuremath{\backslash} n$
