

## Changing Pattern of Women Migration

### What is the issue?

\n\n

\n

- A paper titled “Mobility in India, recent trends and issues concerning database” was released recently.

\n

- The findings of the paper on women migration call for appropriate government response and policies.

\n

\n\n

### What are the highlights?

\n\n

\n

- The paper takes into account the 64th round of the National Sample Survey (NSS).

\n

- It also takes in figures from the 2011 Census and the National Health and Family Survey (NFHS) IV.

\n

- As per NFHS IV, women aged 20-24 married before the age of 18 has gone down from 47% in 2005-06 to 27% in 2015-16.

\n

- Also, women aged 15-19 already mothers or pregnant at the survey time has become half from the 16% in 2005-06.

\n

- The paper highlights that the number of women migrating within India is increasing at a higher rate than men.

\n

- Marriage continues to play an important role in women migration.

\n

- But besides this, economic factors such as employment, business and education have gained in importance.

\n

- It shows a reduced dependence on marriage as the single factor behind women migration.

\n

\n\n

## What are the related concerns in India?

\n\n

\n

- **Participation** - Labour participation is the share of those employed or is seeking work relative to the working-age population.

\n

- India's female labour participation rate is around 33% at the national level.

\n

- This is well below the global average of around 50% and East Asia average of around 63%.

\n

- This is partly due to the missing gender perspective on internal migration policies.

\n

- **Migrants** - Around 80% of migrated eligible female graduates choose not to participate in the organised workforce.

\n

- They are forced to work in construction sites and as household help for low wages.

\n

- Women migrants remain invisible and discriminated against in the workforce.

\n

- This is especially more the case with those in lower-end informal sector occupations.

\n

- Also they don't have facilities like maternity leave and other such entitlements.

\n

- Another concern is the lack of access to proper sanitation, with serious health consequences.

\n

- Migrant women are also more vulnerable to sexual harassment, especially in the hands of agents and contractors.

\n

- Another persistent issue is the gender pay gap, which is not restricted to lower-end jobs alone.

\n

- **Dropout** - India sees the highest drop in representation of women from junior to middle-level positions.

\n

- This is unlike several other Asian countries where such a drop occurs from middle- to senior-level positions.

\n

- This, in turn, impacts the supply line for higher levels.

\n

- Almost one-third of women employees do not resume work, in the absence of a support system at home for child-caring.

\n

\n\n

## **What lies ahead?**

\n\n

\n

- Government's role in labour migration laws and policies is significant to sustain the momentum on migration.

\n

- The government has to ensure a gender-sensitive and rights-based approach in this regard.

\n

- Securing public spaces for women and creating an enabling infrastructure are essential.

\n

- Governments have to ensure that they are safe from stranger violence and harassment from employers.

\n

- **Kerala model** - Kerala has launched Aawaz, a free health care-cum-insurance scheme for migrant workers.

\n

- It covers any migrant worker employed in the state, between the ages of 18 and 60.

\n

- Workers are eligible for free medical treatment worth up to Rs 15,000.

\n

- Also, an insurance coverage of Rs 200,000 for accidental death is provided.

\n

- Medical treatment will be available from all government hospitals and also private hospitals empanelled with the scheme.
