

China Embraces Big-Data

What is the issue?

\n\n

\n

Mobiwik recently published a report that extensively used Big-data analytic tools.

∖n

- China seems to be racing ahead in the Big-data business. \slashn

\n\n

How does the Big-data landscape look in China?

\n\n

\n

- China is already capitalising big data for solutions in areas like policing, education, urban planning & traffic management. \n
- Chinese government feels that the full potential of big data remains unrealised due to low-level sharing of resources.
- Hence, it is even working on establishing industry standards that will facilitate seamless sharing.
- Their aim is to triple the scale of China's big data industry by 2020 to foster new economic growth. $\$

\n\n

What was the Mobiwik report?

\n\n

\n

- Mobike is one of the largest share-cycle service providers in China. $\ensuremath{\sc n}$
- It recently released a white paper on its service, which studied the impact biking on the economy, urban transport, environment and living standards.

∖n

- The report had done an extensive quantitative and qualitative analysis of Mobike's vast trove of travel data.
- It provided remarkably detailed insights on the behavioural patterns of various social groups broken down to clear specifics. \n

\n\n

How does the future look?

\n\n

\n

- Big-data can bring in revolutionary changes in decision making. \slashn
- While concerns about privacy & data abuse are indeed real, completely shunning big-data can't be the solution. \n
- \bullet We therefore need to develop robust structures to facilitate data sharing between entities without compromising on privacy. \n
- All stakeholders the industry, academia, policy makers and the wider public could immensely benefit from big-data. \n
