

China's Exploitative Trade Relations

What is the issue?

\n\n

Chinese trade investments and assistance in some Asian countries are taking shape as exploitative adventures, calling for a coordinated resistance.

\n\n

How are China's actions becoming exploitative?

\n\n

\n

- **SRI LANKA - Investments** - China seems to have taken trade advantage in Sri Lanka by exploiting its economic vulnerabilities.

\n

- Evidently, China has heavily financed some projects including the Hambantota port, power plant, airport, industrial park, sports complex, etc.

\n

- **Debt** - The investments made have proved largely uneconomical.

\n

- Most of the projects remain unutilised or under-utilised and hardly make any substantial returns.

\n

- Given this, the investments and assistance could soon become part of Sri Lanka's mounting official and unsustainable debt burden.

\n

- Notably, Sri Lanka has been spending 90% of government revenues to service debts.

\n

- **Threat** - Unable to repay its debts, Sri Lanka has been forced to convert Chinese investments into equity in Hambantota.

\n

- This has given partial ownership of the port to the Chinese, posing threat for Sri Lanka's sovereignty.

\n

- The projects are also leading to a plunder of natural resources by the Chinese companies.

\n

- Notably, the World Bank has blacklisted some of these companies across the world because of their corrupt practices, including bribery.
- **MYANMAR** - China's belt and road initiative in Myanmar is primarily concentrated on developing the Bay of Bengal port of Kyaukpyu.
- And connecting the port to neighbouring Yunnan province by oil and gas pipelines, and road and rail networks.
- But Myanmar is wary of over-dependence on China.
- This is because of China's environmentally damaging energy projects and its yearning for access to precious metals and stones.
- **PAKISTAN** - China's 'all-weather friend' Pakistan is facing problems in implementing the China-Pakistan Economic Corridor (CPEC).
- Pakistan has some reservations with agreeing to the financial terms set by the Chinese.
- Notably, there is very little transfer of technology and know-how, and minimal local participation in Chinese construction projects.
- Evidently, China is only aiming at making use of its own surplus labour force and construction machinery and materials abroad.
- This is given the fact that its unprecedented domestic construction projects at home are completed.
- Pakistan is also concerned of the whereabouts of the resources to repay the debt that will accrue from the CPEC projects.
- Moreover, Pakistan will soon be unable to credibly claim sovereignty.
- This is because places like the Gwadar port are becoming more a Chinese-run military base, close to the strategic Straits of Hormuz.

\n\n

How do other countries respond?

\n\n

\n

- **India** - By expressing its concerns over the Chinese presence, India has

made Sri Lanka retain the operational control of Hambantota port.

\n

- This is to ensure that Chinese submarines and warships do not freely berth in the port.

\n

- Some pre-emptive action has also been taken to prevent the Chinese from developing Trincomalee as the next port of interest for its strategic ambitions.

\n

- The Indian Oil Corporation has established a business presence in Sri Lanka.

\n

- This is particularly for a progressive involvement in the use of Trincomalee for import and processing of petroleum products.

\n

- **Myanmar** - Myanmar seeks the support of India, Japan, South Korea, the US, the EU and neighbouring ASEAN countries to resist the Chinese pressure.

\n

- **Indonesia** - Indonesia has ensured that it responds cautiously to Chinese inducements and avoids getting closely drawn into a Chinese tactical web.

\n

- In all, other countries should have a coordinated effort to strengthen the economic relations among themselves, to potentially tackle China's exploitative trade relations.
