

## Concerns with A&N Island Development

### What is the issue?

\n\n

\n

- Andaman & Nicobar administration and NITI Aayog will organize an investors' meet in New Delhi.
- Crucial questions about development in the Andaman and Nicobar Islands remain.

\n

\n\n

### What is the objective of the meet?

\n\n

\n

- The meet is organized in regards with tourism projects under a plan called 'holistic development of the islands'.
- The projects are planned on four islands — Long, Neil, Smith and Aves.
- They are undertaken as per decisions of the Islands Development Agency (IDA).
- The specifics of proposals listed for the investors include developing Premium Island Resort, tree houses, etc.
- The projects also include the setting up of infrastructure for power, water, floating jetty, adventure sports, banqueting and conferences.

\n

\n\n

### What are the benefits?

\n\n

\n

- **Natives** - A section of the population has received it with considerable

excitement.

\n

- As, the project would offer varied economic and livelihood opportunities.
- **Tourism** - It also caters to the aspirational dimension of utilizing the potential of the islands to be a world-class tourism destination.
- In addition the projects are to provide world class and sustainable tourism infrastructure.
- **Environment** - The project comes with low environmental impact.
- There are also provisions for socio-economic involvement of local population.

\n

\n\n

## What are the concerns?

\n\n

\n

- **Facilities** - Air strips, floating jetties and premium resorts are promised for the island.
- But the local community still lacks safe and reliable and comfortable ships to travel.
- This is because in an island system shipping is the lifeline.
- Not ensuring this could also pose threats to the safety of the natives.
- E.g. a recent huge leak and filling up of water in a key passenger ship en route to Chennai from Andaman and Nicobar Island.
- This incident questions the whole idea of the grand plans and promises being made.
- **Ecology** - The project cost is met by the local communities and the local environment.
- Though the projects may generate job opportunities, the ecological cost of such initiative must be taken into account.
- Andaman and Nicobar islands are extremely vulnerable landscapes in the time of fast changing climate.

\n

- \n
- So human activities should not aggravate the conditions leading to degradation of the natural capital.
- \n

\n\n

### **What is the way forward?**

\n\n

- \n
- The substantial human, planning and financial resources being spent for the tourism projects can be invested in better and more productive projects.
- \n
- A truly holistic development plan for an island system should have a robust shipping system as its the first building block.
- \n
- In the vision for achieving the ambitious goals, the fundamental elements should not be ignored.
- \n
