

## Concerns with Cryptocurrencies

### What is the issue?

\n\n

In recent times cryptocurrencies are facing fundamental challenges, which ought to be resolved soon.

\n\n

### What are cryptocurrencies?

\n\n

\n

- Cryptocurrency is a digital or virtual currency designed to work as a medium of exchange.
- It uses cryptography to secure and verify transactions as well as to control the creation of new units of a particular cryptocurrency.
- Cryptocurrencies are limited entries in a database that no one can change unless specific conditions are fulfilled.
- Cryptocurrencies are not issued by any central authority therefore they are immune to government interference or manipulation.
- There are many cryptocurrencies in the market of which bitcoin is the most popular. Click [here](#) to more about bitcoins.

\n

\n\n

### What are recent concerns with cryptocurrencies?

\n\n

\n

- The downward trend in the prices of cryptocurrencies after the peak is still continuing.
- This trend is increasing fears of a regulatory crackdown by the

governments as there is no overall authority to help revive the investors trust over these cryptocurrencies.

\n

- Also there is the hurdle of lack of intrinsic value in the cryptocurrencies which makes it difficult for people of to accept cryptocurrencies as a medium of exchange.

\n

- Therefore, cryptocurrencies are mostly seen as a gamble and threat to the sovereignty of the government.

\n

\n\n

### **What are the possible causes behind the crash?**

\n\n

\n

- The rise in cryptocurrencies experience increase in asset prices without any fundamental reason, these bubbles break over time and induce price crashes in the market.

\n

- The cryptocurrencies lack intrinsic value that is required for survival of any commodity.

\n

- This crash indicates that markets will eventually mark down the prices of assets that have no real value, to zero.
