

Concerns with FPI

What is the issue?

\n\n

\n

- Singapore stock exchange and Dubai Gold and commodities exchange are planning to expand their portfolios in India.

\n

- These decisions are taken in a backdrop of uncertain environment for Foreign Portfolio Investments in India.

\n

\n\n

What are recent portfolios decisions about?

\n\n

\n

- A portfolio is a grouping of financial assets such as stocks, bonds and cash equivalents, as well as their funds counterparts, including mutual, exchange-traded and closed funds.

\n

- Portfolios are held directly by investors and/or managed by financial professionals.

\n

- Usually an investors should construct an investment portfolio in accordance with risk tolerance and investing objectives.

\n

- Recently Singapore Exchange (SGX) has decided to offer single-stock futures (SSF) on Indian stocks.

\n

- The Dubai Gold and Commodities Exchange (DGCX) is also considering expanding its portfolio of Indian SSF.

\n

- Volumes in India's derivatives trading segment is expected to be adversely affected by these decisions.

\n

\n\n

How these decisions would hurt India?

\n\n

\n

- Unlike the National Stock Exchange (NSE) and the BSE, the SGX and the DGCX are open 24x7 and these are hard-currency environments.

\n

- There are no transaction taxes akin to India's securities transaction tax (STT) and the local regulators also place no restrictions on foreign portfolio investors (FPIs).

\n

- Given that the SGX and the DGCX offer comfortable regulatory environments, a lot of the derivatives trading volume will likely shift to these offshore centres.

\n

- India will lose out on tax revenue and brokerage income and traders will face disadvantage of being responsive.

\n

\n\n

What are the barriers for FPI in India?

\n\n

\n

- In July, SEBI banned trading in derivatives via P-Notes and demanded direct registration of FPIs carrying out derivatives trades.

\n

- The regulator said derivatives trading via P-Notes would be allowed only to hedge underlying cash positions.

\n

- At the time of the ban, P-Note holders had open positions of over Rs 40,000 crore in the futures and options segment of the NSE, all of them were closed out after this move .

\n

- A further barrier for US-based funds was that they cannot take direct exposure to derivatives offered by Indian exchanges, which are not approved by America's Commodity Futures Trading Commission (CFTC).

\n

- Many used P-Notes to bypass that requirement, as both SGX and DGCX are CFTC-approved and Indian exchanges are not.

\n

- High Securities Transaction Tax (STT) in India is being another source of friction for FPIs, which are being significant cost for high-volume traders.

\n\n

Quick facts

\n\n

FPI

\n\n

\n

- Foreign portfolio investment (FPI) consists of securities and other financial assets passively held by foreign investors.
- It does not provide the investor with direct ownership of financial assets and is relatively liquid depending on the volatility of the market.
- Foreign portfolio investment is different from foreign direct investment (FDI).

\n

\n\n

Participatory Notes (P-Notes)

\n\n

\n

- These are financial instruments used by investors or hedge funds that are not registered with the Securities and Exchange Board of India (SEBI) to invest in Indian securities.
- Any dividends or capital gains collected from the underlying securities go back to the investors.
- Indian regulators are against participatory notes because they fear that hedge funds acting through participatory notes will cause economic volatility in India's exchanges.

\n

\n\n

SSF

\n\n

\n

- Single Stock Futures (SSF) are derivatives instruments that give investors exposure to price movements on the underlying share.

\n

- A futures contract is a legally binding agreement that gives the investor the ability to buy or sell an underlying listed share at a fixed price on a future date.

\n

\n\n

STT

\n\n

\n

- Securities Transaction Tax is levied on every purchase or sale of securities that are listed on the Indian stock exchanges.

\n

- This would include shares, derivatives or equity-oriented mutual funds units.

\n

- The rate of tax that is deducted will vary with different types of transactions and securities.

\n

- STT is deducted at source at the time of the transaction itself, the net result is that it pushes up the cost of the transaction done.
