

Crisil Report on GSDP growth

Why in news?

\n\n

Crisil recently released a report, comparing economic growth of the states in India.

\n\n

What does the report reveal?

\n\n

\n

- Bihar has been ranked the top state among the 17 non-special category States in terms of GSDP (Gross State Domestic Product) growth in financial year 2017-18.

\n

- The state has topped the list by clocking 11.3% GSDP growth in fiscal 2018, which was followed by Andhra Pradesh and Gujarat.

\n

- States like Jharkhand, Kerala and Punjab were at the bottom in terms of GSDP growth.

\n

\n\n

\n

- It further highlighted that 12 out of 17 states saw faster growth in fiscal 2018 compared with the previous 5 years.

\n

- However, the growth did not translate into job creation, as GSDP expansion has come in from sectors which are less job-intensive.

\n

- It noted that growth was not equitable, as the per capital income between low-income states and high income states widened over the last five years.

\n

- Since there is pressure on fiscal deficit for the Centre, the states have become the engines of government spending, accounting for a bulk 65% of the total money spent.

\n

- However, most states were found to have breached their targets under the fiscal responsibility and budget management act.

\n

\n\n

What is the status of inter-state disparities as revealed by the report?

\n\n

\n

- The inter-State disparities have widened in recent years even as the larger economy grows in size and influence on the global stage.

\n

- Many low-income States have experienced isolated years of strong economic growth above the national average.

\n

- But economic convergence within the country remains a distant dream as poorer States continue to lag behind the richer ones in economic growth.

\n

- Though Bihar was the fastest-growing State this year, they have still failed to bridge their widening gap with the richer States.

\n

- This is because they have simply not been able to maintain a healthy growth rate over a sustained period of time.

\n

- Richer States like Gujarat, for instance, have been able to achieve sustained economic growth and increase their gap over other States.

\n

- The report found that there was a slight convergence in the per capita income levels of the poorer and richer States between fiscal years 2008 and 2013.

\n

- But the trend was reversed in the subsequent years.

\n

- Between fiscal years 2013 and 2018, there has been a significant divergence rather than convergence in the economic fortunes of the poorer and richer States.

\n

- This was the result of richer States continuing to show strong growth while the poorer States fell behind.

\n

- In fact, only two of the eight low-income States in 2013 had growth rates above the national average over the next five years.

\n

- On the other hand, six out of the nine high-income States recorded rates

higher than the national average during 2013-18.

\n

\n\n

What explains the divergence in the economic fortunes of States?

\n\n

\n

- The report suggests that government spending boosted GSDP growth in the top-performing States, particularly in Bihar and Andhra Pradesh.

\n

- But their double-digit growth rates have come along with a burgeoning fiscal deficit.

\n

- The impact of greater spending was that 10 of the 17 States breached the 3% fiscal deficit limit set by the Fiscal Responsibility and Budget Management Act.

\n

- Many other big-spending States, however, have not managed to achieve growth above the national average.

\n

- Punjab and Kerala, which are at the bottom of the growth table, are ranked as profligates by the report.

\n

- This suggests that the size of public spending is probably not what differentiates the richer States from the poorer ones.

\n

- Thus, apart from public spending, states should strengthen their state-level institutions in terms of -

\n

\n\n

\n

1. Their ability to uphold the rule of law

\n

2. Creating a free, competitive marketplace for businesses to thrive

\n

3. The quality of public spending

\n

\n\n

\n

- These factors could be crucial determinants of the long-run growth prospects of States.
