

Disaster Management - Cyclone Gaja

Why in news?

\n\n

Recently, Cyclone Gaja made its landfall between Nagapattinam and Vedaranyam in Tamil Nadu.

\n\n

How prepared was the State?

\n\n

\n

- Tamil Nadu was more prepared than before to deal with Cyclone Gaja.

\n

- More than 15 years ago, efforts were on to professionalise disaster management through a dedicated national and State organisation.

\n

- It appears to be paying off, with bureaucracies acquiring higher efficiency in terms of early warning and impact mitigation.

\n

- The National Cyclone Risk Mitigation Project was started by the Ministry of Home Affairs.

\n

- This has been working to reduce the impact of such catastrophic events on Andhra Pradesh, Odisha, West Bengal, Tamil Nadu and Gujarat.

\n

- Notably, these are classified as States with higher vulnerability; most western coastal States are in the next category.

\n

\n\n

\n\n

What were the impact and the State response?

\n\n

- \n
- Cyclone Gaja took a toll of at least 45 lives.
- \n
- The severe cyclonic storm damaged infrastructure, property and agriculture.
- \n
- It has affected some southern districts, felling tens of thousands of trees and also 30,000 electricity poles along the coast.
- \n
- It also hit residents in some central Kerala districts.
- \n
- State Disaster Management Authority issued a stream of alerts ahead of the cyclone.
- \n
- It helped coastal residents move to camps and adopt safety measures.
- \n
- State's measures after the cyclone, to clear roads, remove fallen trees and repair power infrastructure and communications, helped restore some stability.
- \n
- Tamil Nadu's political parties have acted in a mature manner, keeping partisan criticism aside the relief and rehabilitation works.
- \n
- The government has to now secure without delay the financial relief.
- \n
- Rs. 10 lakh has been promised for families of the dead, besides the compensation for lost crops, trees and livestock.
- \n
- Also, provision of emergency health intervention and rehabilitation

assistance to rebuild lives has to be ensured.

\n

\n\n

What is the way ahead?

\n\n

\n

- India's coastline experiences a lower frequency of tropical cyclones compared to many other regions.

\n

- But the loss of life and destruction is much higher.

\n

- Coastal districts must thus continue to strengthen resilience against extreme weather events.

\n

- They have to focus on reducing the hazard through policies to upgrade infrastructure and housing.

\n

- States have to expand resilient housing, build better storm shelters and create financial mechanisms for insurance and compensation.
