

## **Draft National E-Commerce Policy**

### **Why in news?**

\n\n

A Commerce Ministry task force has submitted its recommendations on a draft national e-commerce policy.

\n\n

### **What was the task force for?**

\n\n

\n

- The task force was set up by a 70-member think tank headed by the Minister for Commerce and Industry.

\n

- The task force was to suggest a framework for the national policy on e-commerce.

\n

- With the task force's recommendations in place, the think tank will now work on creating a draft policy.

\n

- It is the final draft of the think tank which will be taken up by the government.

\n

\n\n

### **What are the recent developments?**

\n\n

\n

- India's e-commerce sector is currently estimated to be worth around \$25 billion.

\n

- It is expected to grow to \$200 billion over the next 10 years.

\n

- Cheaper smartphones and data tariffs, and enhanced connectivity contribute to the growth prospects.

\n

- The bigger e-commerce firms have largely covered the metros and large cities.  
\n
- As a next phase, they could move to tier-II and tier-III towns.  
\n
- Expansion of 3G and 4G networks to these towns have put more consumers online.  
\n

\n\n

### **What is the need for a policy?**

\n\n

- \n
- The e-commerce growth has led to job creation, productivity improvement, and increased online presence of consumers.  
\n
- To benefit from these opportunities, it is essential to be responsive to the underlying challenges.  
\n
- There is thus the need for clearly laid-down rules for electronic commerce in the country.  
\n
- Many of these rules currently exist in some or the other form.  
\n
- But they are enforced by a multiplicity of government departments and regulators.  
\n
- Hence, a national e-commerce policy would consolidate the various norms and regulations to cover all online retailers.  
\n

\n\n

### **What are the current limitations?**

\n\n

- \n
- **Restrictions** - India does not allow FDI in e-commerce companies that hold their own inventories/stocks [inventory-based model]  
\n
- On the other hand, the government allows 100% FDI in the marketplace model.  
\n
- Here, marketplace operators cannot hold inventory (stocks) and sell products

on their platform.

\n

- They can only facilitate the online sale process for other vendors.
- E.g. Amazon and foreign-funded companies in India including Flipkart, Shopclues and Snapdeal
- These only provide platforms to other retailers and vendors by allowing them to list their products.
- However, huge share of investments in e-commerce firms are coming from abroad.
- So the e-tailers are setting up seller entities that sold foreign firms' products on the platforms.
- Eventually, in 2016, the government mandated that no platform should have more than 25% of its sales coming from a single seller.
- Also, they are not allowed to directly or indirectly influence prices of products sold on their platforms.
- With these restrictions, e-commerce companies have not been able to offer their in-house brands extensively.
- **Consumer Protection** - There have been incidents of customers expressing dissatisfaction with products purchased online.
- In some cases, bricks and soaps have been delivered instead of mobile phones.
- This is an inherent flaw of the marketplace model.
- Because, market platforms do not have full control over the supply chain and only functions as a facilitator.
- There are also complaints of prices being higher than the maximum retail price (MRP).
- National Consumer Helpline of Consumer Affairs Ministry is currently the only redressal mechanism.

\n

\n\n

## What are the key recommendations?

\n\n

\n

- **Inventory model** - FDI may be allowed in inventory-based e-commerce companies up to 49%.

\n

- This comes with a condition that the e-tailer sells 100% Made-in-India products.

\n

- This will allow e-commerce firms to offer their own brands as long as they are made in India.

\n

- It is also suggested that foreign e-commerce websites be brought on a level playing field with their Indian counterparts.

\n

- **Marketplace model** - For online marketplaces, restrictions would be imposed on group companies of such platforms.

\n

- The marketplaces will not be able to offer deep discounts through their in-house companies listed as sellers.

\n

- This is to prevent them from directly or indirectly influencing the prices of goods and services.

\n

- Bulk purchases of branded goods “by related party sellers which lead to price distortions in a marketplace” will be prohibited.

\n

- **Consumer Protection** - To provide a forum for consumers, the task force suggested a Central Consumer Protection Authority (CCPA).

\n

- This, besides helping consumers, will act as the nodal agency for intra-government coordination.

\n

- It will thus provide a platform for e-commerce operators regarding complaints of fraudulent activities.

\n

- **Redressal** - The draft suggests a separate wing to be set up in the Enforcement Directorate.

\n

- This will handle grievances related to guidelines for foreign investment in ecommerce.

\n

- **Payment** - Currently, a large number of payments for online purchases is

made through the cash-on-delivery option.

\n

- To make online payments safer, the task force has suggested creating a fraud intelligence mechanism.

\n

- This would use artificial intelligence-based authentication systems, for early detection of frauds.

\n

- **Regulation** - Greater regulatory scrutiny has been recommended for mergers and acquisitions that may distort competition.

\n

- A relook has been suggested on what constitutes entry barriers and anti-competitive practices.

\n

- The Competition Commission of India has been asked to undertake such exercises.

\n

- This assumes significance in the light of the recent acquisition of Flipkart by US retail major Walmart.

\n

- The policy also suggests a sunset clause for deep discounting wherein a “maximum duration” would be set for “differential pricing strategies”.

\n

\n\n

## **What are the implications?**

\n\n

\n

- If implemented, it could impact consumers’ online shopping experience in multiple ways.

\n

- They include how discounts are given, the availability of newer products, and the redressal of complaints.

\n

- E-commerce platforms would have to mandatorily provide the government’s RuPay payment option.

\n

- Suggestion for creation of a single national regulator to oversee the entire industry requires action from multiple ministries and regulators.

\n

- Also, there is need for amendments to existing legislation and rulebooks.
