

## Ed-Sector Reforms

### What is the issue?

\n\n

\n

- Our socio-economic context demands a comprehensive overhaul of the education landscape for ensuring sustained progress.

\n

- Enhancing the autonomy for higher education institutions is a positive sign, but a lot more is needed.

\n

\n\n

### What is the socio-demographic context?

\n\n

\n

- The competitive landscape of advanced manufacturing and services places India in direct competition with advanced countries of the world.

\n

- To sustain this challenging stature, India needs to benchmark its education and skills systems with the best in the world.

\n

- This is even more significant for our country as it has envisioned being the 'Skill Capital' of the world driven by its favourable demographics.

\n

- Also, the vision of 'Make in India' can be achieved only if there is alignment of skill development, education and research with the overall economic agenda.

\n

- In this context, the developments in the education space in the last two years have been very encouraging, particularly regarding enhancing autonomy.

\n

\n\n

### How are the significant changes in the Ed-sector?

\n\n

\n

- **Autonomy** - The UGC has provided almost complete academic autonomy to universities and colleges through gazette notifications recently.

\n

- Top rated universities are freed of UGC inspections and can start new programmes and skill courses without prior approvals.

\n

- They can also set up open research parks, incubation centres and engage in foreign collaboration with leading global universities by their own terms.

\n

- Regulations for permitting universities to opening constituent autonomous off-campus colleges have also been liberalised.

\n

- **Financing** - Higher education institutes can now avail concessional loans from 'Higher Education finance Agency' (HEFA) for infrastructure expansion.

\n

- Notably, the government would pay back the loan and institutions would only be liable to pay back the interests for the loan taken.

\n

- This is expected to bring a lot of accountability in the public higher education system and could open up a credit market for higher education.

\n

- **Skilling** - Basic skills for low-end manufacturing also has to be developed with an appropriate approach by establishing a relevant skilling setup.

\n

- Several skilling initiatives have been initiated through stand-alone schemes and also along with private collaborations (like NSDC).

\n

\n\n

## **How does the future look?**

\n\n

\n

- Mutual recognition of Indian higher and vocational education qualifications abroad which shall go a long way in global benchmarking of Indian learning.

\n

- The recent agreement with France, Australia, Malaysia, Qatar and Mauritius among others for cooperation is significant in this regard.

\n

- We also need a continued stream of structural reforms (through financial and administrative autonomy) to catch up with the world.

\n

- Government needs to enhance budgetary allocation for education to 6% of

GDP and aid quality enhancement of research.

\n

\n\n

\n

- The process for 'Institutes of Eminence' and complete freedom to elite institutions like IIMs is a good start.

\n

- Also, Ed-tech companies are already transforming learning, which needs to be promoted in a big way.
