What is Effective Altruism (EA)?

- Effective altruism is a broad community of people working on a diverse set of projects with a common goal, doing as much good as possible.
- The idea was that one should compare charitable causes and only contribute to those that generate a high return.
- Example - Choosing cancer research over an orphanage.
- It works on an "earning to give" model, implying careers that are effective need to be chosen in order to give.
- The idea which was first propounded by **David Ricardo** two centuries ago, later became the basis of a new moral philosophy, called effective altruism.
- **Difference** - The difference between effective altruism and philanthropic organisations is EA would bring data-based analysis to the business of charity, thus making donations as effective as possible.
- Data, statistics, and impact are the key aspects.

Why is effective altruism so significant?

- **Prioritizing the causes** - The EA community does well to prioritize causes by selecting for importance, tractability, and neglectedness.
- **Improves life** - Application of this framework can be very effective ways of improving lives on a large scale.

- **Social responsibility** - Effective altruism offers a thoughtful framework for corporate and individual social responsibility.

Why is it being criticised?

- **Ultra-rationalism** - This cult of ultra-rationalism is criticized for the view that it is morally better to get rich than to slave away in a badly-paid job that might be socially useful.
- **Long-termism** - Some key adherents have moved on to long-termism to save us from future threats rather than common ideas such as funding mosquito nets to save lives of existing human beings from malaria.
- **Application of data** - It is impossible to apply data and accountability to the future.
- **Elitist altruism** - Some proponents of elitist altruism create giant fortunes, enjoy the glow of admiration for their philanthropy by slashing government revenues and thus weakening the state services.
