

## Ennore Oil Spill

### Why in news?

\n\n

Two vessels collided off Ennore port and resulted in the oil spill that spread southward beyond Marina beach, about 25km from the accident spot.

\n\n

### What happened?

\n\n

\n

- A LPG tanker and an oil and chemical tanker collided within the port limits in Ennore on 28<sup>th</sup> Jan 2017.

\n

- The incident happened about two nautical miles outside the harbour.

\n

\n\n

\n\n

\n

- The port authorities initially claimed that there was no oil spill.  
\n
- However in two days a thick layer of floating oil was found on the shoreline of the Marina beach, which is more than 20km from Ennore port.  
\n
- Later it was confirmed that One tonne oil was leaked, which resulted in floating oil slicks.  
\n
- He said steps were being taken to procure oil dispersants which will have to come from the Centre.  
\n

\n\n

### **What is the impact?**

\n\n

- Ecologists assert that there will be long term negative impact of this **oil spill on Chennai's marine ecology**.  
\n
- But the large disaster is being underplayed and it cannot be manually managed.  
\n
- **Advanced technology, mechanized methods and rapid measures to control the spread of the oil is required.**  
\n
- The INCOIS report has mentioned that the spillage has polluted 24.06km of the city's shoreline.  
\n
- The biggest source of toxins is through inhalation and **crude oil has benzene, which is a carcinogen**.  
\n
- Chennai which has two ports and yet **the preparedness to handle is appalling**, according to environmentalists.  
\n
- Despite knowing that a disaster is rolling out, there is **still no mechanism in place** which is a bigger disaster compared to the accident.
