

# **Ensuring Rail Safety**

#### What is the issue?

 $n\n$ 

The rising incidence of accidents on the Indian Railways (IR), calls for an assessment of the Indian Railways system.

 $n\n$ 

## What are the problems in this regard?

 $n\n$ 

\n

• Capacity utilisation - This refers to the traffic flow in the available railway lines.

\n

- For optimal performance, utilisation should be 80% to 90% of the capacity.
- $\bullet$  However in India, in many routes, it ranges from 120% to 150% and sometimes exceeds this which poses risks. \n
- **Maintenance** IR carried out modernisation and upgradation of track and other infrastructure with a massive infusion of funds from 1985-2000.
- This includes acquisition of new locomotives, coaches and wagons.
- $\bullet$  However after that, IR was not focussing on the last mile works that are essential for unlocking the full potential of an upgraded network. \n
- This include works like easing of sharp curves, strengthening some bridges, improving track geometry to tighter tolerances, cab signalling, etc.
- **Safety** Over-utilisation of railway lines leaves little time for safety inspections and essential maintenance works.
- Also, worldwide, reducing the speed differential between freight and passenger trains is done along with raising the speed of trains.
- This is the key to increasing capacity and improving safety; however IR has

not met this.

۱n

- $\bullet$  As a result of all these, IR has one of the highest incidence of rail accidents due to material, equipment and human failures.  $\mbox{\sc h}$
- Besides, IR is planning for expansion through Dedicated Freight Corridors (DFCs) and High-Speed Rail (HSR) lines.

 $n\n$ 

### What is to be done?

 $n\n$ 

\n

- Given the safety concerns with existing lines, these new plans require well planning before execution.
- It is high time that IR shifts focus to the core network that carries more than 80 per cent of the total traffic.
- Also, the last mile works for upgrading the trunk routes which were repeatedly deferred should be undertaken on a priority basis.
- $\bullet$  Only this will ensure a faster and a safer rail travel in India.  $\mbox{\sc h}$
