

EU's fine on Google

Why in news?

 $n\n$

The EU had slapped a record € 4.34-billion (\$5.04 billion) antitrust fine on Google.

 $n\n$

What is the reason?

 $n\n$

\n

- Google has used Android to strengthen the dominance of its search engine.
- It aimed at ensuring that traffic on Android devices go to its search engine.

 $n\n$

How did Google do this?

 $n\n$

\n

- Google imposed three types of restrictions on Android device manufacturers and network operators.
- **Pre-installation** Manufacturers were asked to preload the Google Search app and Chrome browser.
- This was as a condition for licensing Google's Play Store.
- \bullet Pre-installation of the apps can create a status quo bias among the users.
- Evidently, Google Search app is consistently used more on Android devices.
- However, it is not the case with Windows Mobile devices where users must download it.

\n

\n

• Incentives - Google offered financial incentives to large device manufacturers and network operators.

۱n

• The condition was to exclusively pre-install Google Search across their entire portfolio of Android devices.

۱n

- This significantly reduced their incentives to pre-install rival search apps.
- However, EU said that by 2014, Google had stopped the practice.
- **Tweaked versions** Android is an open-source operating system.
- It has its code published by Google online whenever a new version is released.

\n

• So based on this source code, developers like Android can create their own versions.

۱n

- This could be done even without getting approval from Google.
- So Google had not allowed the "forked" versions of Android to pre-install Google's proprietary apps.

۱n

 Google's measure had thus prevented many manufacturers from developing and selling devices based on these tweaked versions.

• E.g. Amazon's Android fork called 'Fire OS'

• EU now insists that Google allow the forked versions of Android.

 $n\n$

What are the earlier instances?

 $n\n$

\n

- **EU** Earlier, the EU fined Google €2.42 billion.
- \bullet This was on charges of prioritising its own services on the search platform.
- By this, Google gave itself an advantage over third-party service providers.

• **India** - The Competition Commission of India had earlier fined Google Rs 136 crore.

۱n

• It was slapped for its unfair business practices in the Indian online search market.

\n

• The National Company Law Appellate Tribunal (NCLAT) stayed the ruling on Google's appeal.

\n

• Nevertheless, NCLAT asked it to pay 10% of the penalty. The tribunal will soon hear the matter.

\n

 $n\n$

What are the implications?

 $n\n$

\n

• The recent penalty may not financially hurt Google with over \$100 billion in cash reserves.

\n

- \bullet But it could bring about changes in the way the Android ecosystem functions. $\ensuremath{\backslash} n$
- It would set a precedent for other antitrust cases against Google.
