

Fertilizer Subsidy in India

What is the issue?

\n\n

There has been a delay in the implementation of a new system of disbursement of fertiliser subsidy by the present government.

\n\n

What is fertiliser subsidy?

\n\n

\n

- Fertilizer subsidy is the difference between the holding price of fertilizers and the price at which fertilizers are made available to consumers.

\n

- For sustained agricultural growth and to promote balanced nutrient application, the fertilizers are made available to farmers at affordable prices.

\n

- Financial support is also given on both indigenous and imported urea.

\n

\n\n

How fertiliser subsidy is followed in India?

\n\n

\n

- At present, subsidies are paid to fertilizer companies on the basis of receipt of fertilizer at identified godowns in districts.

\n

- Fertilizer subsidies would be transferred to manufacturers **on the basis of actual sales.**

\n

- With the new system, a PoS machine would be installed in every fertiliser godowns.

\n

- It capture the buyer's identity based on Aadhaar biometric authentication, with the quantities purchased.

\n

- This move which will pave the way for implementation of the direct benefit transfer (DBT) system.

\n

\n\n

What are the issues with older system?

\n\n

\n

- The Subsidies were not received by the farmers, it benefited the fertilizer companies.

\n

- The beneficiaries have been the large farmers and not small & marginal farmers.

\n

- Distorted subsidy regime, **depleted the NPK use ratio** (Nitrogen, Prosperous, Potassium), the normally accepted ratio is 4:2:1.

\n

\n\n

What are the advantages of the new system?

\n\n

\n

- The data generated from PoS machine sales would make it possible to both **weed out non-farmers.**

\n

- It restrict the subsidy to a maximum of 30-35 bags of all fertilisers per farmer.

\n

- This will automatically cover all small and marginal farmers.

\n

- The subsidy is directly credited into Aadhaar-seeded bank accounts of the farmers.

\n

\n\n

What is the reason for the delay of the new system?

\n\n

\n

- The official reason for not going ahead in the current Kharif season, as earlier planned, has been the lack of availability of the PoS devices.

\n

- They have been installed in only half of the country's nearly 2 lakh fertiliser retail points.
\n
- Technical malfunctions in their integration with the central server that may have to track over 50 crore transactions.
\n
- There are issues of network connectivity in remote rural areas.
\n

\n\n

Quick facts

\n\n

Cropping seasons in India

\n\n

- The agricultural crop year in India is from July to June.
\n
- The Indian cropping season is classified into two main seasons-
\n
- Kharif: Cropping season is from July -October during the south-west monsoon, crops include rice, millets, oilseeds, cotton etc.
\n
- Rabi: Cropping season is from October-March (winter), the crops grown between March and June are summer crops, crops include wheat, cereals, chickpea, linseed, mustard (oilseeds) etc.
