

## Financial Stability Report - RBI

### Why in news?

\n\n

Reserve Bank of India has recently released the financial stability report.

\n\n

### What are the highlights?

\n\n

\n

- **NPA** - RBI report warns that the gross non-performing assets (GNPAs) could rise.

\n

- The *GNPAs* of scheduled commercial banks could rise from 11.6% in March 2018 to 12.2% in March 2019.

\n

- This would be the highest level of bad debt in almost two decades.

\n

- It is more worrying for GNPAs of banks under *prompt corrective action framework*.

\n

- It is expected to rise to 22.3% in March 2019, from 21% in March 2018.

\n

- **Capital** - GNPAs will increase the size of provisioning for losses and affect banks' capital position.

\n

- The capital to risk-weighted assets ratio of the banking system as a whole is expected to drop.

\n

- It could come down from 13.5% in March 2018 to 12.8% in March 2019.

\n

- **Bank frauds** - RBI notes that more than 85% of frauds could be linked to PSBs.

\n

- But, their share of overall credit is only about 65%.

\n

- The PSBs are far more prone to fraud than the private banks.

- \n
- This is significant in light of the recent Punjab National Bank scam.
- \n
- It is possibly due to the corporate governance issues in public sector banks.
- \n
- This also largely contributed to the weak lending practices, the core of the NPA crisis.
- \n

\n\n

## What are the concerns?

\n\n

- \n
- **Banks** - NPA crisis has affected the banking system and impeded credit growth in the economy.
- \n
- It was expected to be reaching to the lowest levels.
- \n
- But RBI report comes as a caution to the health of the banks and the economy.
- \n
- **Economy** - Economy has registered a healthy growth rate of 7.7% in the recent quarter.
- \n
- The deteriorating health of banks is in contrast to the recovering economy.
- \n
- **External risks** - The RBI, however, has warned about the rising external risks.
- \n
- It poses a significant threat to the economy and to the banks.
- \n
- Credit has already started to flow out of emerging markets such as India.
- \n
- This is due to the
  - \n
  - i. tightening of monetary policy by the US Federal Reserve
  - \n
  - ii. increased borrowing by the U.S. government
  - \n
- \n
- \n
- **Prices** - The increase in commodity prices is another risk on the horizon.
- \n
- This could pose a significant threat to the rupee and the fiscal and current

account deficits.

\n

- All these factors could well combine to increase the risk of an economic slowdown.

\n

- It could, in turn, exert pressure on the entire banking system.

\n

\n\n

## **What is the way forward?**

\n\n

\n

- RBI expects improvement in the capital position of banks with

\n

\n\n

\n

- i. the government's recapitalisation plan for banks

\n

- ii. the implementation of the Insolvency and Bankruptcy Code

\n

\n\n

\n

- But beyond these, government should consider changes to aspects of operational autonomy and the ownership of PSBs.

\n

- The governance reforms at PSBs, if implemented, can help improve their financial performance.

\n

- It could also reduce their operational risks.

\n

\n\n

## Quick Facts

\n\n

### Gross and Net NPAs

\n\n

\n

- Gross non-performing assets (GNPAs) refer to the sum of all the loans that have been defaulted by the borrowers within the provided period of 90 days.

\n

- The net non-performing assets are the amount that results after deducting provision for unpaid debts from gross NPA.

\n

- The GNPAs does not amount to the actual loss of the organization.

\n

- But net non-performing assets amount to the actual loss, as the provision for unpaid loans has already been deducted.

\n

\n\n

### Prompt Corrective Action (PCA)

\n\n

\n

- PCA is primarily to take appropriate corrective action on weak and troubled banks.

\n

- The RBI has put in place some trigger points to assess, monitor and control banks.

\n

- The trigger points are on the basis of CRAR (a metric to measure balance sheet strength), NPA and ROA (return on assets).

\n

- Based on each trigger point, the banks have to follow a mandatory action plan.

\n

- It prohibits them from undertaking fresh business activities such as opening branches, recruiting talent or lending to risky companies.

\n

- RBI could take discretionary action plans too apart from these.
