

Food Security and Nutrition in the World

What is the issue?

\n\n

\n

- The UN's State of Food Security and Nutrition in the World report points to a worrying trend on food security at global level.

\n

\n\n

What are the highlights?

\n\n

\n

- Absolute numbers of people facing hunger and poor nutrition have always been high.

\n

- However, there was a reduction in the rate of undernourishment since the year 2000.

\n

- But that has slowed from 2013, registering a worrying increase in 2016.

\n

- Around 815 million people endure chronic food deprivation in 2016, as against 775 million in 2014.

\n

- The deprivation is greater among people in conflict-affected and climate change events affected regions.

\n

- Contrastingly, the report says that child undernutrition rates continue to drop.

\n

- However, one in four children is still affected by stunting.

\n

\n\n

What are the causes?

\n\n

\n

- The above numbers are averages and do not reflect the disparities among regions, within countries and between States.

\n

- Nevertheless, the common factors making food scarce and expensive for many are:

\n

\n\n

\n

- i. the impact of the economic downturn

\n

- ii. many violent conflicts

\n

- iii. fall in commodity export revenues

\n

- iv. failure of agriculture owing to drought and floods

\n

\n\n

\n

- The findings represent a setback to all countries trying to meet the Sustainable Development Goal

\n

\n\n

\n

- i. on ending hunger

\n

- ii. achieving food security

\n

- iii. improved nutrition

\n

\n\n

What is the case with India?

\n\n

\n

- India's efforts at improving access to food and good nutrition are led by the National Food Security Act.

\n

- There are special nutritional schemes for women and children operated through the States.

\n

- Despite these, 14.5% of the population suffers from undernourishment.
\n
- At the national level, 53% of women are anaemic.
\n
- Thus, Centre and State governments fall short on the commitment to end undernourishment.
\n
- Institutions such as the State Food Commissions have not made a big difference either.
\n
- Distributing nutritious food as a public health measure is still not a political imperative.
\n

\n\n

What is the way forward?

\n\n

- \n
- Families below the poverty line consume more cereals and less milk compared to the affluent.
\n
- NITI Aayog's report on the role played by rations in shaping household and nutritional security highlights this.
\n
- Complementing rice and wheat with more nutritious food items should be the goal.
\n
- The report on nutritional deficiency calls for evaluating the role played by the Public Distribution System.
\n
- Assessing dietary diversity for those relying on subsidised food is crucial.
