

## FRDI and digital economy concerns

#### What is the issue?

 $n\n$ 

The "bail-in" clause of the Financial Resolution and Deposit Insurance Bill (FRDI) has led to worries about the safety of bank deposits.

 $n\n$ 

#### How a Bail-in clause of FRDI works?

 $n\n$ 

\n

- In case of a bankruptcy the bill enables the government to confiscate the deposits of ordinary citizens by a Resolution corporation to liquidate the assets of the bank or insurance company.
- $\bullet$  The Resolution Corporation is empowered to monitor financial firms, calculate stress and take corrective actions in case of a failure. \n
- The bill proposes 'bail-in' as one of the methods to resolution which gives banks the authority to issue securities as a replacement of the money deposited.

\n

- $\bullet$  The insurance option covers only up to Rs.1,00,000 of the deposited money. \n
- The remainder of the sum deposited with a bank will be converted to tradable financial assets which can be redeemed.

 $n\n$ 

## What are the reasons behind proposing such bill?

 $n\n$ 

\n

• Banks have been a major source of funding for governments and their economies across the world.

۱n

- $\bullet$  Most of government lending happens through loans which are not backed by savings but instead through fresh money creation. \n
- $\bullet$  Policies like negative interest rates push depositors to rush out of banks to escape the tax imposed on their deposits.  $\mbox{\sc h}$
- Such an event can lead to severe bank runs and destabilise the banking system because bank deposits are only fractionally backed by actual cash.

 $n\n$ 

### How the bill threatens the depositors?

 $n\n$ 

\n

• FRDI possess a larger threat to the deposits of ordinary citizens as it undermines the safety of bank deposits.

۱n

• According to Section 52 of the proposed Bill, depositors will lose their rightful claim to retrieve their savings in case of liquidation of banks and insurance companies.

۱'n

• It would also strip depositors of the power to withdraw their deposits in the form of cash to escape any tax or other forms of confiscation by the government.

۱n

• Since the banks are already filed for bankruptcy, redemption value of tradable financial assets will not be immediately proportionate with the deposit amount.

# **How Digital economy favours banks?**

 $n\n$ 

\n

• Digital economy makes banks easier to carry out their business of credit creation without the risk of having to satisfy the demand for cash from depositors.

\n

- It also prevents recurrent crises of liquidity that are faced by banks.
- Under a cashless banking system depositors are essentially locked in by banks.

\n

• Depositors in such cases will have no other option but to spend their money to escape a penalty on it.
