

GDP Numbers - Is India steadily loosing Momentum?

What is the issue?

\n\n

\n

- India's economy is slowing down for the past 5 quarters.
- \n
- Investments-led growth can reverse the situation but the policy response has been sluggish
- \n

\n\n

How is the slowdown explained?

\n\n

\n

- GDP growth has lost momentum since March 2016.
- \n
- The slowdown is being explained away either as a transitory phenomenon or as beyond the government's control.
- \n
- Deficient rains, sluggish world economy, or lately due to demonetisation and the GST have all been cited as reasons at different times.
- \n
- While the reasons change, the economic trend remains the same.
- \n

\n\n

How have the various drivers of the economy fared?

\n\n

\n

- In the boom years, four engines powered the economy - Exports, Government investments, Private consumption & Private investments.
- \n
- While government investments and private consumption were going strong even 2 years ago, the other two went out of steam early and remain so even now.

- \n
- The slowdown has now spread to all aspects of the economy.
- \n
- There was a noted slowdown in the quarter ending June 2017 in all four growth engines.
- \n

\n\n

What could be the explanations?

\n\n

- \n
- As incomes improve, private spending and tax collections pick up.
- \n
- Hence government investments and private consumption depend on how well the economy is doing as a whole.
- \n
- **Exports** - The global economic downturn that followed the 2008 financial crisis dealt a body blow to exports.
- \n
- Recovery in the global economy has lifted exports of most Asian countries, but Indian exports are stagnating.
- \n
- This has partly been due to an over-valued rupee.
- \n
- **Investments** - India's economic future can improve significantly with investments-led growth.
- \n
- The decline in private investments over the past 5 years is so sharp that it has offset the increases in government investments.
- \n
- The steps taken for improving the ease of doing business and the foreign investments regime have proved insufficient.
- \n

\n\n

Why are investments not coming up?

\n\n

- \n
- Companies don't seem convinced that new investments will be profitable.
- \n
- Many variables like costs, availability of finance, land, labour, technology, logistics, and taxation affect investment decisions.

- \n
- As the government is politically sensitive in decision making, it is unable to progress on land and labour reforms.
- \n
- Also, credit creation has almost ceased due to the NPA problem.
- \n
- Additionally, in an environment of constant shocks like demonetisation and unanticipated policy changes, investment decisions tend to get postponed.
- \n

\n\n

How has the government responded?

\n\n

- \n
- While the government is notably swift with decision-making there seems to be a disconnect between policy tools and objectives.
- \n
- Part of the problem seems to be that the government is inert even to the advice of its own economists.
- \n
- Even the analyses documented in the Economic Survey has had minimal influence on policy
- \n
- Demonetisation has proved a drag on an already slowing economy.
- \n
- While its effect on the informal sector is beginning to be understood, an untimely GST may aggravate its woes.
- \n
- While the speedy decision making is important, it needs to be recognized that quality advice needs to be heeded to.
- \n
