

Geostrategic motives of MAHSR

Click [here](#) to know more about MAHSR

\n\n

What is the issue?

\n\n

The High Speed Rail cooperation between India and Japan will revitalise the stagnant Japanese economy.

\n\n

What are the issues with HSR globally?

\n\n

\n

- Before signing on India, Taiwan had been Japan's only successful sale, but its high-speed line has suffered heavy losses.

\n

- Profitability is a notoriously hard for high-speed train networks, most lines across Europe are in loss.

\n

- In Japan only some routes are profitable, but to achieve this requires high volumes of passengers and highly priced tickets.

\n

- These conditions are not easy to replicate across the globe and other high-speed lines in Japan have struggled.

\n

\n\n

How this deal is geostrategic to Japan?

\n\n

\n

- The latest challenge to Japan's ambitions is the emergence of China as the new emperor of the superfast train.

\n

- Chinese technology is also cheaper, making it an attractive proposition for

the cost-conscious developing and middle-income countries of Asia.

\n

- In 2015, China grabbed Japan's HSR deal with Indonesia in last minute, it also won Thailand's HSR deal which Japan was planning earlier.

\n

- The battle to export bullet trains is clearly reflective of the broader rivalry between China and Japan for influence in Asia.

\n

- The India deal is not only a business coup for Japan but also a geostrategic one.

\n

\n\n

What are the concerns of India?

\n\n

\n

- In India, concerns related to costs, safety and misplaced priorities persist.

\n

- There are climatic differences, the possibility of electrical blackouts, as well as dust and other environmental conditions in India.

\n

- Japan clarified these issues will be addressed, stating that when it developed its first Shinkansen lines in the 1960s, it was a poor country as well that had required loans from the World Bank.
