

# **Green Deposits**

### Why in news?

RBI has unveiled a framework for banks and NBFCs to accept green deposits that are meant for investing in eco-friendly climate projects.

## What are green deposits?

- A green deposit is a fixed-term deposit for investors looking to invest their surplus cash reserves in *environmentally friendly projects*.
- It indicates the increased awareness of the importance of <u>ESG (Environmental, social and governance)</u> and sustainable investing.
- Many lenders like HSBC and HDFC have launched green deposits in India *for* corporates as well as individuals.
- Common themes for green deposits are renewable energy, clean transportation, pollution prevention and control, green building, sustainable water, wastewater management, and others.

#### What is the RBI framework about?

- **Aim** To prevent <u>greenwashing</u>, which refers to making misleading claims about the positive environmental impact of an activity.
- **Deposits** As per the RBI framework, banks will offer the deposits as cumulative/ non-cumulative deposits.
- On maturity, the green deposits would be renewed or withdrawn at the choice of the depositor.
- The green deposits shall be denominated in *rupees only*.
- **Application** The framework applies to all <u>scheduled commercial banks and small</u> <u>finance banks</u> (except for regional rural banks and local area banks) and <u>non-banking</u> <u>finance companies</u> (including housing finance companies).
- Investors <u>Both corporate and individual customers</u> can invest in green deposits.
- Banks and NBFCs shall put in place a comprehensive board-approved policy on green deposits, and a copy of the policy shall also be made available on their websites.
- Sectors eligible to receive green deposits The sustainable and eligible sectors include <u>renewable energy</u>, <u>waste management</u>, <u>clean transportation</u>, <u>energy efficiency</u>, <u>and afforestation</u>.
- Banks will be barred from investing green deposits in business projects involving *fossil fuels, nuclear power, tobacco*, etc.
- **Review** The allocation of funds raised through green deposits during a financial year shall be subject to an *independent Third-Party Verification (TPV)* on an annual basis.
- Impact assessment by lenders Lenders must annually assess the impact associated with the funds lent for or invested in green finance activities and submit a review

report before their Board.

• Penalty - There are no penal provisions when the bank doesn't utilise the deposits.

### How are green deposits different from normal deposits?

- **Projects** Normal deposits cannot be allocated for specific projects, whereas green deposits are carved out specifically towards green financing.
- **Interest rate on green deposits** It is at the prerogative of the lender and currently the rates on these deposits aren't significantly different from regular deposits.

### What are the challenges of green deposit?

- **Flaws in design** Flaws in design leads to limitation of the range in the green projects that the banks can invest.
- **Reality being different** Green investment products are often just a way to make investors feel good about themselves and that these investments don't really do much good to the environment.
- **Project sustainability** It is not sure whether the banks invested in the green projects will be sustainable.
- Lack of awareness Lack of awareness among the bank staffs leads to delay in the process of obtaining green deposits.
- Lower interest rate The investor seeks only for high return deposits and doesn't care about being green.
