

GSLV-F15 NVS-02 Mission

Why in News?

GSLV-F15 NVS-02 mission is the 100th launch from the Satish Dhawan Space Centre in Sriharikota, scheduled for January 29.

- **GSLV-F15 NVS-02** Geosynchronous Satellite Launch Vehicle (GSLV)- F15/ Navigation with Indian Constellation-2 Satellite (NVS-2).
- **GSLV-F15 17**th **flight** of India's Geosynchronous Satellite Launch Vehicle (GSLV).
 - 11th flight with Indigenous Cryo stage.
 - 8th operational flight with Indigenous Cryogenic stage.
- **Payload** Its fairing is a metallic version with a diameter of 3.4 meters.
- It will place NVS-02 satellite into a *Geosynchronous Transfer Orbit (GTO)*.

- **NVS-02 satellite** It is the 2nd satellite in the NVS series.
- Navigation with Indian Constellation (NavIC) NVS-02 satellite is part of NavIC.
- It is India's independent regional navigation satellite system designed to provide accurate Position, Velocity and Timing (PVT) service to users in India.
- It <u>extends to region of about 1500 km beyond Indian land mass</u>.
- U.R. Satellite Centre (URSC) <u>NVS-02</u> was designed, developed and integrated at the <u>U.R. Satellite Centre (URSC)</u> with the support of other satellite-based work centres.
- Navigation Payloads It operates in L1, L5, and S bands and employs <u>Tri-band</u> antenna.
- Rubidium Atomic Frequency Standard (RAFS) Is the main component of the

- navigation payload.
- RAFS is an *atomic clock* which acts as a stable frequency reference for the navigation payload.
- Ranging Payloads It consists of *C-band (CxC) transponder* used for 2-way Code Division Multiple Access (CDMA) ranging to facilitate precise orbit determination.

Code-Division Multiple Access (CDMA) is a digital cellular technology that uses spread spectrum techniques to allow multiple users to share the same frequency band simultaneously.

- **Lift off mass** 2,250 kg.
- Power handling capability Approximately 3 kW.
- **Usage** A combination of indigenous and procured atomic clocks for precise time estimation.
