

## Hike in Small Savings Interest Rates

### Why in news?

\n\n

The Centre has announced increases of 30-50 basis points in rates of post office savings schemes for the upcoming October-December quarter.

\n\n

### Why is the rates revision?

\n\n

\n

- The Shyamala Gopinath panel was set up in 2010 to recommend, besides others, on ways to make small saving plans more market-linked.

\n

- Based on these recommendations, interest rates on small savings schemes are reviewed before the end of every quarter.

\n

- Accordingly, the new rates are announced for the next quarter.

\n

- The revised rates mean that fresh deposit between October 1 and December 31 will get higher interest.

\n

\n\n

### What were the key changes?

\n\n

\n

- The rates are revised for Small saving schemes such as Public Provident Fund (PPF), National Savings Certificates and Post Office Deposit Scheme.

\n

- Rates on short-term deposits are increased by 30 bps (100 bps is 1 per cent).

\n

- Higher increases of 40 bps were reserved for special schemes such as the -

\n

\n\n

- \n
- i. Post Office Monthly Income Scheme
  - \n
  - ii. Sukanya Samridhhi
  - \n
  - iii. Kisan Vikas Patra
  - \n
  - iv. Public Provident Fund
  - \n
  - v. National Savings Certificates
  - \n

\n\n

- \n
- Senior Citizen Savings Scheme (SCSS) saw an increase of 50 bps.
- \n

\n\n

## **How will it help?**

\n\n

- \n
- **Banks** - Indian banks have always delayed passing on market interest rate increases to their depositors.
  - \n
  - On the other hand, they transmit rate increases promptly to their borrowers.
  - \n
  - Bank deposit rates have climbed by just 50 bps in the past year.
  - \n
  - But government security yields have jumped by 100-140 bps.
  - \n
  - Post office term deposits are now set to offer 6.9 to 7.8% for one- to five-year tenors.
  - \n
  - This will make the banks raise their low deposit rates of 6.25-7.25 %.
  - \n
  - Hence the move, essentially, realigns the returns to small savers with prevailing market interest rates.
  - \n
  - **Savings** - The latest RBI Annual Report showed that in FY18, household savers halved their incremental deposits with banks.
  - \n
  - But they doubled their holdings of hard currency and raised their equity and mutual fund bets fourfold.
  - \n

- So the higher rates on small savings schemes will hopefully discourage savers from hoarding cash.  
\n
- This will also prevent them from taking uninformed bets on equity or hybrid mutual funds, without understanding the risks.  
\n
- The move may mean increased borrowing costs for the Centre.  
\n
- However, it sends out the right signals to the market as well as investors engaged, in reallocating their financial savings.
