

## Human Animal Conflict - Nagarhole Tigers

### Why in news?

\n\n

In one month, seven tigers including a six-month-old cub have died in the Nagarhole-Bandipur reserves in Karnataka.

\n\n

### Where is Nagarhole National Park?

\n\n

\n\n

\n

- Nagarhole National Park also known as Rajiv Gandhi National Park, is a national park located in Kodagu and Mysore district in Karnataka.

\n

- This park was declared as a Project Tiger tiger reserve in 1999.

\n

- The reserves form an integral part of the Nilgiri biosphere which holds world's single largest tiger population estimated over at 570 tigers.

\n

- It is located to the north-west of Bandipur National Park and the **Kabini reservoir** separates the two parks.

\n

- Bandipur and Nagarahole hold more than 221 tigers cumulatively.  
\n
- In terms of tiger mortality, however, the two reserves have taken a huge hit since 2010, with 68 deaths .  
\n

\n\n

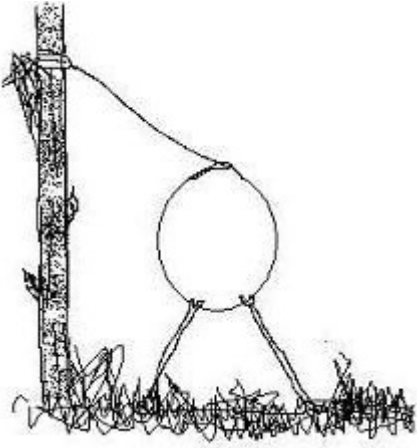

### **What is the reason for the deaths?**

\n\n

- \n
- Protection against poachers and habitat manipulation has seen the prey base increase.  
\n
- With the increase in the weaker tigers (injured or older tigers and younger males) are pushed to the periphery.  
\n
- Coffee and areca nut plantations are prevalent near Nagarahole Tiger Reserve.  
\n
- Tigers enter the plantation in search of rabbits and wild boars.  
\n
- They get caught in the barbed-wire fence cannot extricate itself from the wire and dies.  
\n
- They also get trapped in the snares setup by humans.  
\n
- The snare is a loop of wire in the form of a noose.  
\n
- When an animal enters the noose, any slight weight on the dangling string makes it tighten. The more the animal struggles, the tighter it gets.  
\n

\n\n

\n\n

\n\n

\n\n

### **Why snares have been set up?**

\n\n

- \n
  - The snares are often set for rabbits and wild boars.
- \n
  - They are source of food for locals and the estate owners encourage it as a way to deal with the crop loss due to boar raids.
- \n
  - They result in killing the tigers, and the panicked people who set the trap, dump the body of the tiger and clears the evidence of the snares.
- \n
  - Forest officials ended up in this speculation because the body of the tigers dead are left with nails, claws and skin untouched. This rules out the role of poachers.
- \n
  - The post-mortem of some dead tigers showed that they have had lost their canines and their stomachs were empty.
- \n
  - This confirms that the tigers that are unable to hunt in the wild, move to the peripheries to hunt slow-moving livestock.
- \n
  - The recent government order allowing hunting of wild pigs to reduce crop damage may be a prime driver for the increase in the number of snares.

\n\n

### **What has been done?**

\n\n

\n

- The forest department resolved to weed out all these traps.
- \n
- Elephant camps have been mobilised to aid the search. Over 200 snares were found in the first two days.
- \n
- The operations are concentrated around Lakshmana Tirtha river.
- \n
- There is no way to find out who has placed the traps.
- \n
- Also the forest officials do not want to antagonise locals as they need them for conservation.
- \n
- This trend will continue as long as “unscientific” ways of dealing with crop loss continue.
- \n
- In the reserve and surrounding areas, the anger among the people is generally against wild boars and elephants.
- \n
- Dynamites and Pellet Guns have been used against elephants, while cases of electrocution have also been witnessed. This also should be seriously addressed.
- \n
- But the presence of the tiger is largely tolerated.
- \n
- These lands are considered as sacred groves and the big cat are worshipped.
- \n
- They do not want the tiger killed. They only ask for was protection for the people and livestock.
- \n
- This sentiment should be harnessed and enough awareness about snares should be made to conserve tigers.
