

## Implications of Caste-Census

### What is the issue?

\n\n

\n

- With 2021 census approaching, the debate around having caste-based census has come up.

\n

- It is essential to understand the implications that caste statistics would have in the country.

\n

\n\n

### What was caste census's role in colonial times?

\n\n

\n

- Census of 1931 provides, to date, any information regarding the size and characteristics of various castes in India.

\n

- Colonial Censuses, beginning with the first Census in 1871, included questions about caste.

\n

- This generated an idea of homogeneous and classifiable community.

\n

- It was used to divide and conquer India.

\n

- This was done by first privileging Brahmins as interpreters of Indian culture.

\n

- Slowly they were targeted as the roots of caste-based oppression and inequality.

\n

- This classification was also a source of anti-Brahmin movements of 20th century.

\n

- It thereby influenced the processes of political representation.

\n

\n\n

## How does caste census impact society?

\n\n

\n

- **Society** - There are apprehensions that caste based census would further promote:

\n

\n\n

\n

- i. Caste-based political mobilisation
- ii. strong sentiments for or against reservations

\n

\n\n

\n

- Post-Independence Censuses have thus shied away from including questions about caste.
- However, Patels, Gujjars, Jats and Marathas do not seem to care about the lack of Census data as they demand reservations.
- Also, even without caste census, caste does play a role in elections in terms of vote banks.

\n

\n\n

## Does caste census play a role in economy?

\n\n

\n

- Caste data from 1931 Census and a few special purpose surveys define certain categories.
- They include Dalits, Adivasis, OBCs and upper castes.
- It is assumed these broad caste-based social categories continue to shape economic conditions in 21st century India.
- However, each of these categories consists of thousands of jatis (castes) and upjatis (subcastes).
- Hence, without accurate data for each of these, the claim that it shapes

economic conditions is baseless.

\n

- Also, the society and economy, since 1931 census, has undergone various changes, crossing these caste boundaries.

\n

\n\n

## **What are the transformations since 1931?**

\n\n

\n

- **Land** - Land ownership that perpetuated the power of upper castes has lost its hold.

\n

- Land fragmentation and agricultural stagnation have turned many upper caste landowners into marginal farmers.

\n

- Besides, rising rural wages, particularly construction wages, has made the landless better.

\n

- **Poverty** - Broadly, mean consumption expenditure of forward castes is higher than that of Dalits.

\n

- However, clusters of poverty persist among forward castes also, as per National Sample Survey (NSS).

\n

- The bottom fourth of forward castes are poorer than the top half of Dalits.

\n

- **Education** - India Human Development Survey shows that 56% of Dalit children aged 8-11 cannot read.

\n

- But this is also the case with 32% of forward caste and 47% of OBC children.

\n

- **Overall**, some jatis have managed to pull themselves out of poverty and marginalisation.

\n

- While other groups have had a deterioration in their status.

\n

\n\n

## **What is the need for caste census?**

\n\n

\n

- Economic growth and affirmative action by governments have changed relative fortunes of various groups.  
\n
- Hence, it is time to collect data that reflects the current situation.  
\n
- So the social apprehensions on implications of caste census are largely invalid.  
\n
- Without caste data, the discourse on caste and affirmative action are dominated by decisions made by the colonial administration.  
\n
- Collecting data on caste is now essential to rationalise the reservation policies.  
\n

\n\n

- **Challenges** - Sometimes the same caste is spelt in different ways, or individuals report their jati and others upjati.  
\n
- This makes it difficult to create mutually exclusive categories.  
\n

\n\n

## **What could the methodology be?**

\n\n

- There is nearly three years' time before the Census of 2021.  
\n
- Data from Socio-Economic Caste Census and technologies rooted in machine learning are at disposal.  
\n
- It would be possible to set up an expert group that uses the SECC data in conjunction with other data sources.  
\n
- Comprehensive list of castes can be made and condensed into meaningful categories via machine learning tools.  
\n
- These categories could then be validated by domain experts in various States.  
\n
- It can then be used to make a district specific list of castes that would cover more than 90% of individuals in any given district.

\n

- Respondents can then be allowed to self-identify from the precoded list.

\n

- The residual group's responses recorded verbatim could be categorised later.

\n

- This is very similar to the technique through which occupational and industrial classification systems are created.

\n
