

Inclusive Development Index

Why in news?

\n\n

Inclusive Development Index was released recently by the World Economic Forum.

\n\n

What is the Inclusive Development Index?

\n\n

\n

- The IDI has been developed by the WEF as a new metric of national economic performance.

\n

- It is seen as an alternative to GDP.

\n

- The Index on inclusiveness reflects more closely the criteria by which the people evaluate their countries' economic progress.

\n

- The index has three pillars of growth for global economies namely:

\n

\n\n

\n

1. growth and development

\n

2. inclusion

\n

3. intergenerational equity and sustainability

\n

\n\n

\n

- Accordingly, the parameters focus on the living standards of people and future-proofing of economies by the WEF.

\n

- In the recent index, Norway tops the chart followed by Iceland and Luxemburg in advanced economies.

- Lithuania, Hungary, and Azerbaijan are the toppers among the emerging economies.

\n\n

How is India's inclusivity?

\n\n

- **India** has been ranked **62 out of 74** emerging economies.
- There has roughly been 2.3% improvement in the overall five-year trend of the IDI for India.
- However, despite this, India is **ranked below** the **neighbouring countries** of Pakistan, Sri Lanka and Nepal.
- Evidently, Pakistan has been ranked 47, Sri Lanka 40, and Nepal 22.
- **Among G20** economies, India ranks second last.
- This is ahead of only South Africa and trails behind Russia (19), China (26) and Brazil (37).
- Other **South Asian economies** such as Malaysia, Thailand, Indonesia and Philippines also ranked far better than India.

\n\n

What are the other key findings?

\n\n

- India performs best (44th) in terms of **Intergenerational Equity and Sustainability**.
- This is primarily a result of low dependency ratio, with higher young population.
- Both **labour productivity and GDP per capita** posted strong growth rates over the past five years.
- However, **employment** growth has slowed.

\n

- It is highlighted that the incidence of **poverty** had declined in India over the past five years.

\n

- However, six out of 10 Indians still live on less than \$3.20 per day.

\n

- Healthy **life expectancy** also increased by approximately three years to 59.6.
