

India in US's STA-1 List - Import of Dual-use Tech

Why in news?

 $n\n$

\n

 \bullet After 1% years of negotiations, the US has eased controls on high-technology dual-use exports to India.

\n

• The US has granted India exemption under the Strategic Trade Authorisation-1 list.

\n

 $n\$

How has India-US defence ties evolved?

 $n\n$

۱n

- India signed the civil nuclear deal with the United States in 2008.
- A key objective was to gain access to high technology.
- Notably, India had been denied access, especially from the 1970s through the 90s.

\n

• Towards the end of Obama's presidentship, the US recognised India as a "Major Defence Partner".

۱n

• It committed itself to sharing technology to the same level as its closest allies and partners.

\n

 It also agreed to collaboration for defence co-production and codevelopment.

\n

 $n\n$

Why is the delay then?

 $n\n$

\n

• The US either has military alliances such as the NATO or bilateral defence treaties with other countries.

\n

• Hence, the status of Major Defence Partner is unique to India.

• So Indian and American negotiators had to draw up the framework of what the status would entail.

\n

• Given this, the export of defence and dual-use technology by the US is mostly a "political determination".

\n

• This is driven by two factors namely US national security and the recipient's regional stability.

\n

• <u>Dual-use</u> exports refer to an item or technology that can be put to <u>both</u> <u>military and civilian use</u>.

\n

 $n\n$

What is the recent move?

 $n\n$

\n

• India was in STA-2 list (Strategic Trade Authorisation-2), along with 7 other countries.

۱'n

• These include Albania, Hong Kong, Israel, Malta, Singapore, South Africa, and Taiwan.

\n

• India has now been elevated to the STA-1 list of countries.

 $n\n$

What is Strategic Trade Authorisation?

 $n\n$

\n

• In 2009, Obama announced a comprehensive review of the US export control system.

\n

- As part of this came the concept of Strategic Trade Authorisation (STA).
- This is a move towards a licence-free or license exemption regime.

\n

• Accordingly, two lists were created namely STA-1 and STA-2.

• STA-1 and STA-2 established a hierarchy among those the US was willing to certify as "good countries".

۱n

• STA-1 - STA-1 countries are America's most trusted allies.

\n

• The STA-1 list has 36 countries including NATO allies and bilateral treaty allies like Japan, South Korea, and Australia.

• The US considers the non-proliferation controls of these countries the best in the world.

\n

• These are also among those that are part of the four multilateral export control regimes:

\n

 $n\n$

\n

 $i.\ the\ Nuclear\ Suppliers'\ Group\ (NSG)$

۱n

ii. Missile Technology Control Regime (MTCR)

۱n

iii. the Australia Group

\n

iv. the Wassenaar Arrangement

\n

 $n\n$

\n

• STA-1 countries have <u>licence-free access to almost 90% of dual-use technology.</u>

\n

• They are also eligible to import items for reasons of national security, chemical or biological weapons, etc.

\n

\n

• This is irrespective of whether the technology or item impacts regional stability or American national security.

• **STA-2** - Countries in the STA-2 list enjoy some form of licensing exemption.

• But they cannot access dual-use items/technology that may impact regional stability, or contribute to nuclear non-proliferation, etc.

- They cannot access high technology from the US without specific licences.
- They have to apply for a licence for every item on the Commerce Control List (of dual-use items).

 $n\n$

What is the significance?

 $n\n$

\n

• China, Pakistan, and Russia are on neither list.

 Albania is a NATO member, but is still in STA-2, and Israel, a major US ally, is not in STA-1.

\n

• Given these, India joining an elite group of allies of the US is a significant move.

\n

• India is now part of STA-1, despite not being member of all four multilateral export control regimes.

۱n

- \bullet This is thus another testament to India's non-proliferation credentials. $\ensuremath{\backslash} n$
- India can now access 90% of defence technology and equipment for dual-use supplied by US government and its defence industry.
- It is expected to lead to greater high-technology trade and commerce.
- For Indian high-tech industry, this could open up doors for both sales and manufacturing in India.
- Third countries can also set up manufacturing units, requiring import of dual-use equipment from the US, without the license process.
