

## **Indian economy and stimulus package**

### **What is the issue?**

\n\n

There is a declining trend in terms of investment and manufacturing, which calls for discussion on stimulus package.

\n\n

### **What is a stimulus package?**

\n\n

\n

- A stimulus package is a package of economic measures put together by the government to stimulate a struggling economy.

\n

- The objective of a stimulus package is to reinvigorate the economy and prevent or reverse a recession by boosting employment and spending.

\n

- Stimulus package argues that the impact of a recession can be lessened with increased government spending.

\n

\n\n

### **What are the challenges faced by Indian economy?**

\n\n

\n

- Since the economy recovered from the Global Financial Crisis in 2011-12, there has been a weakness in manufacturing.

\n

- There has been no fresh investments in the businesses for creating additional capacity.

\n

- The inadequate demand cannot be revived by temporarily increasing public expenditure.

\n

- Appreciating real exchange rate has weakened both the domestic market and the export market.

\n

- This appreciation is driven by FII inflows and remittances, without any increase in productivity of the industry.

\n

\n\n

### **How these challenges can be tackled?**

\n\n

\n

- Rupee could be depreciated to neutralise the real exchange rate appreciation.

\n

- The government can intervene in specific sectors with multiplier effect, to create additional demand.

\n

- Labour intensive sectors like construction, apparel, assembling etc. could boost the manufacturing sector.

\n

\n\n

### **Does Indian economy needs a stimulus package?**

\n\n

\n

- At present, there is no external financial shock which calls for a rapid response like the 2008 crisis.

\n

- The internal shock of demonetisation is over and the economy has been remonetised.

\n

- Initial disruption due to implementation of GST needs to be mitigated and compliance problems addressed.

\n

- There is no other factor which could be seen as a shock which calls for an immediate response in terms of a stimulus package.

\n

\n\n

### **Way forward**

\n\n

\n

- Recent historical experience shows that comparative advantage is often

created and nurtured by smart state action.

\n

- The successful East Asian economies, starting with Japan, followed by South Korea, and more recently China have followed this model.

\n

- India needs to attempt this and succeed in getting higher growth with jobs.
