

India's Action on Import Duty

Why in news?

\n\n

India has increased import duty on 19 products such as diamonds, shoes, ACs, and refrigerators.

\n\n

What is India's plan on Import duty?

\n\n

\n

- India has increased import duty on 19 products such as diamonds, shoes, ACs, and refrigerators.

\n

- These products cover \$12 billion or close to 2.6 per cent of India's annual imports.

\n

- The reason is US-China trade war has increased the wedge, many countries, including India, are actively considering such measures.

\n

- Free imports allow a growing economy to expand production quickly thus to address the concerns India has hiked its tariffs on import duties.

\n

\n\n

Where does other nations stand at this regard?

\n\n

\n

- The US, the EU and most other developed countries charge high import duty on products of interest to developing countries and grant calibrated access only.

\n

- The EU and the US charge 10-20 per cent import duty on Indian apparel and shoes.

\n

- Japan charges 300 per cent duty on rice, Many European countries charge

seasonal import duties on agriculture products.

\n

- Total import duty on some types of steel in the US and EU now exceeds 100 per cent.

\n

- South Korea is an excellent example of export-led development, but in most sectors it imposes high import duties and non-tariff barriers.

\n

\n\n

What are the concerns on India's measure on imports?

\n\n

\n

- Economists argue that governments should refrain from regulating trade flows.

\n

- Free imports would boost the purchasing power of consumers by allowing them to buy high-quality goods at low price.

\n

- If trade flow is unhindered, the law of comparative advantage takes over, forcing countries to specialise and trade in few products in which they have some competitive advantage.

\n

- This benefits consumers and producers of both exporting and importing countries.

\n

\n\n

Why India has chosen such measure?

\n\n

\n

- China has repeatedly proved that comparative advantage, in most cases, can be developed in a short period through a sprinkling of incentives.

\n

- The trade war is all about increasing import duties. The US is fast approaching a point where it would impose extra 25 per cent import duty on all goods coming from China and, China is mechanically retaliating by doing the same.

\n

- China accounts for more than 95 per cent of imports of India for these items: blankets, bed linen, artificial flowers, kitchenware, baby carriages, clock

movements, tricycles, festival items, combs, vacuum flasks, candles, etc.

\n

- India's dependence on China for these products was less than 10 per cent in 2005, these are low technology, labour-intensive products that can be manufactured locally.

\n

\n\n

What measures needs to be considered?

\n\n

\n

- India follows an open trade policy where most products can be imported without prior permission on payment of import duty.

\n

- India could reduce its dependence on imported medicine and emerge as the world's leading generics supplier because of not recognising product patents for a few years.

\n

- Today, low priced and high-quality cars and medicines from India find a ready market the world over.

\n

- Trade should largely be free from regulation and India need to work on active measures on import substitutes.
