

Influencing Voter's Choice - Facebook

What is the issue?

\n\n

∖n

- The Cambridge Analytica involved in data breach controversy used users' details obtained from Facebook.
 - \n
- It was allegedly used to influence voter's preferences in the American Presidential election. \n

\n\n

How are user preferences observed?

\n\n

\n

- Individual interacting with Facebook over a period of time are observed. \slashn
- The platform gathers enough information about the likes and dislikes of the person.
 - \n
- It becomes aware of the kinds of people the individual follows and the types of news sources that s/he prefers. \n
- The range of actions and reactions from the user, for the posts from these sources, is also observed. $\$
- All these data, when combined, help in putting together a picture of the user's political affiliation and inclinations. \n

\n\n

How are users generally targeted?

\n\n

\n

• Facebook has an advertisement preferences page.

∖n

• It helps the platform to serve up advertisements according to user preferences.

\n

- Based on an individual's likes and dislikes, it lists topics, people and interests, which it thinks are good enough to push ads to the user. \n
- With the availability of advertisements of all kinds, Facebook allows a good degree of targeting.
 - ∖n
- Usually, the targeting is based on age, location and interests. $\space{\space{1.5}n}$

\n\n

What did Cambridge Analytica do?

\n\n

∖n

- Cambridge Analytica did not gather data from Facebook through advertisement preferences.
 - \n
- The firm allegedly took the help of a psychology professor at Cambridge University.

\n

- The professor designed an application, 'thisisyourdigitallife', to gather information about users.
 - ∖n
- This third party app used Facebook's login API (application programming interface).

\n

• This allows people to use their Facebook profile instead of creating a new account.

\n

- This is allowed under Facebook's rules and guidelines. $\slash n$
- However, the professor then shared the data with Cambridge Analytica, which is against the morms. \n
- The app was projected to be for a personality quiz. \slashn
- The questions were framed in a manner so as to draw out details about the quiz-taker's political leanings and related aspects. \n
- The acquired data would then provide raw material for a detailed profile of

```
the potential voter.
```

\n

\n\n

How were voters influenced?

\n\n

∖n

- With the kind of data Cambridge Analytica had, it allegedly influenced voters in many American states.
 \n
- It specifically targeted those who had not made up their minds, and had a high probability of moving.
- \bullet E.g. people dissatisfied with economic slowdown and resultant unemployment were targeted with the pro-Trump campaign. \n
- A certain line of narrative to these voters over a period of time may have helped them in making their choices.
