

Institution Building for Achieving SDGs

What is the issue?

 $n\n$

\n

- UN's "Sustainable Development Goals" (SDGs) has inspired many and there seems to be a global consensus on them beyond governments.
- The efforts of various stakeholders need to be effectively coordinated for achieving better outcomes.

 $n\$

Why do we need large scale coordination?

 $n\n$

\n

- SDGs have been observed to prominently figure in "business conferences, civil society organizations and government reports".
- \bullet The 17 SDGs fall into four groupings namely:\n
 - **Human Development -** "Poverty, hunger, health, education, and gender equality".
 - \circ $\boldsymbol{Environment}$ "Water, energy, climate action, life below water, and life on land".
 - Economy "Decent work, economic progress, reduced inequalities, responsible consumption and production, and industry innovation".
 - Structure Building "peace, justice and strong institutions" and "partnerships for growth".

\n \n

 \bullet Problems such as persistent poverty and inequality, poor health, and environmental degradation are systemic issues. \n

- They have multiple interacting causes and can't be solved by any one actor.
- \bullet Hence, strong institutional partnership and cooperation $% \left(1\right) =0$ as outlined in the last two SDGs are essential.

 $n\n$

What are the current management challenges?

 $n\n$

\n

- \bullet Philanthropists and corporates (through CSR) are giving back to society in programmes aligned with the SDGs. $\$
- Once they start, they realize the need for partnering NGOs who have local knowledge and have established community and government relationships.
- While all stakeholders recognize the need for effective partnerships, effective management practices remain elusive.
- \bullet But governments and CSR initiatives tend to construct centralized, top-down programmes to achieve scale and efficiency simultaneously, $\ensuremath{\backslash} n$
- Hence, there is inherent strain in deploying best managment practices and the typical "command and control" dynamics continue to dominate.
- \bullet This approach works with a "one size fits all" mindset and also hinders effective ground coordination due to the complicated command structure. \n
- Also, the ultimate beneficiaries aren't adequately represented in this module and "people-centric design" takes a backseat.

 $n\n$

How important is institution building in human progress?

 $n\n$

\n

- SDGs are a realization that humanity cannot postpone much longer the development of new strategies for the management of the commons.
- \bullet Humanity's progress is a history of evolution of institutions that have enabled societies to achieve what they want. $\mbox{\sc h}$

 Notably, the demand for increased sea trade saw the birth of new forms of business institutions such as the limited liability company in the 17th century.

\n

- \bullet Also, the idea of an equal society gave rise to elected parliaments world-over. $\ensuremath{^{\backslash n}}$
- \bullet Hence, faster progress towards the SDGs will require new models of enterprises in which the people must have a much greater say in governance. \n

 $n\n$

What kind of institutional changes are needed?

 $n\n$

\n

- \bullet The very conception of SDGs requires institutions that enable large-scale people participation, which is in line with the democratic norms. \n
- According to SDGs, every individual has fundamental needs such as health and education, and political rights in the governance.
- \bullet But expenses are incurred for ensuring that all get access to these services. $\mbox{\ensuremath{\upshape \ensuremath{\upshape \ensuremath{\up$
- \bullet Hence, this calls for building economically sustainable business modules like Co-operatives and Social Entrepreneurship. $\mbox{\sc h}$
