

# **IUCN's Gender-based Study**

### Why in News?

The International Union for Conservation of Nature (IUCN) has studied the effects of climate change and environmental degradation on gender-based violence.

### What does the study reveal?

- This study shows that the damage humanity is inflicting on nature can fuel violence against women around the world.
- This study adds to the urgency of halting environmental degradation alongside action to stop gender-based violence in all its forms.
- It demonstrates that these two issues need to be addressed together.

## What is the survival strategy followed?

- According to the study, girls in Ethiopia and South Sudan are being sold off in marriage during extreme droughts, in exchange for cattle.
- It is a survival strategy to get rid of a daughter to relieve the pressure on the family, or it's a way to generate income.
- The rate of **child and forced marriages** increases in crisis situations.
- Growing resource scarcity also increases the risk that women and girls will be victims of violence.

## What problems do women face due to water scarcity?

- With increasing drought and desertification in the global south, more and more water sources and wells are drying up.
- Women who go to fetch water are forced to walk farther for that water.
- Because of this, the risk of sexual assault also increases.
- The same risk applies to gathering firewood.
- So wells are being built in the villages directly, or nearby, and try through reforestation efforts to plant trees near settlements.
- In addition to practical measures, aid organizations have also called for changes to traditional gender roles.
- It's also important that girls and women know who they can contact after an assault, and that they're encouraged to do so.

## What problems do women face due to scarcity of fish?

- Women living on many of Africa's coasts and lakes have also suffered as fish have become scarcer.
- Fishermen peddling their wares are now not only expecting money as payment they're also demanding sex.
- According to the IUCN study, this practice is now so common in western Kenya that it has a name: the Jaboya system.
- To counteract this form of sexual exploitation, women have been given the opportunity to breed fish in ponds around Lake Victoria, Africa.
- This way, they can now set up their own business and sell fish without getting into violent situations.

### What is the situation of the women farmers?

- In places where women are responsible for agriculture, a sudden natural disaster or extreme weather event can have a dramatic effect on their social and family standing.
- If harvests are threatened or wiped out altogether, it can lead to violence often from within their own families.
- Diversifying their sources of income is the most important way to protect women.

#### How do traditional societal roles lead to death?

- When societies dictate certain behaviours and prohibit others to women, they
  can suffer terribly in extreme weather situations and during natural
  disasters.
- Women are also more likely to die as a result of flooding, because they rarely seek refuge in emergency shelters.
- Most women prefer to barricade themselves in their huts, where they're often simply washed away by the floods. Eg: Bangladesh shelters.
- But men also die because of these traditional societal roles, as men receive significantly less help than women in crisis situations.
- This is primarily related to the traditional view of masculinity.

#### How do environmental crimes lead to violence?

- Environmental crimes, such as poaching and illegal resource extraction, can also lead to gender-based violence.
- According to the IUCN study, threats and sexual violence such as rape are
  often used to target women environmental activists to undermine their status
  within the community.
- It is also done to prevent other women from working to preserve the

environment.

• Similar strategies are also used in industrialized nations, as women who work on environmental issues are threatened with rape on social media in order to intimidate and silence them.
