

## Kerala - Paddy Shortage

### Why in news?

\n\n

The Chief Minister was in the national capital in January seeking a greater allocation of rice to the State.

\n\n

### What is the reason for poor paddy cultivation in Kerala?

\n\n

\n

- It is a reflection of the failure of public policy.

\n

- **Labor cost** - Initially men from agriculture sector migrated to gulf region in search of better opportunities.

\n

- As the higher incomes transformed the households socially, the women too withdrew from agriculture.

\n

- This hit paddy cultivation most because mostly women were traditionally in the planting and harvesting of paddy in the state.

\n

- The sector began to face severe labour shortage.

\n

- As a result the wage rose.

\n

- This made the cultivation of paddy no longer viable, as cheaper rice came in from the rest of India.

\n

- **Land Ownership** - In abolishing tenancy the land reforms had extinguished the traditional landlords.

\n

- But it did not inevitably transfer land to those who actually laboured on the field.

\n

- Many agricultural labourers would have not migrated if they also owned

the land.

\n

- **Leasing** - Kerala is rare among the world's economies where agricultural production actually declined after land reforms.

\n

- In theory this can be rectified, if those with the ownership of land but not wishing to cultivate leased it out.

\n

- But leasing was made unlawful by the land reform Act.

\n

- At the time of its legislation, tenants were vulnerable of eviction at will.

\n

- Therefore this archaic law currently holds more of a symbolic value.

\n

- The law discourages tenancy as unlawful but is positive about the alienation of agricultural land to other purposes.

\n

- **Environment** - The present natural environment in Kerala is less hospitable to agriculture of any kind, let alone paddy cultivation.

\n

- This is due to the depletion of groundwater and sand mining of the riverbeds. There has also been the alienation of agricultural land.

\n

\n\n

## **What should be done?**

\n\n

\n

- Kerala needs a land use policy that conserves every bit of its natural capital.

\n

- The State could consider acquiring all unused paddy land and making it available to the Adivasis on long-term lease.

\n

- It also should make amendment in its laws to enable leasing and consolidation of lands.

\n

- Public policy is likely to adapt only if political parties are pressurised by a citizenry.

\n

- Therefore citizen should also work towards improving the paddy cultivation by saving diversion of agricultural land to other purpose and

the regeneration of degraded lands.
