

Legalising Marijuana in India

Why in news?

\n\n

Women and Child Development Minister has suggested legalising marijuana in India for medical purposes.

\n\n

What is Marijuana?

\n\n

\n

- Marijuana is a psychoactive drug from the Cannabis plant used for medical, recreational & religious purposes.

\n

- Cannabis can be used by smoking, vaporization, within food, or as an extract.

\n

- It creates mental and physical effects, such as a "high" or "stoned" feeling, a general change in perception, and an increase in appetite.

\n

- Short term side effects may include a decrease in short-term memory, dry mouth, impaired motor skills, red eyes, and feelings of paranoia or anxiety.

\n

- Long term side effects may include addiction, decreased mental ability and behavioural problems in children whose mothers used cannabis during pregnancy.

\n

\n\n

What is its historic significance in India?

\n\n

\n

- Cannabis has been used since ancient times in India, dating back to 2000 BCE.

\n

- The cannabis plant has been mentioned as one of the five sacred plants in the Vedas.

\n

- Bhang, an edible preparation of cannabis, which is 'consumed either in the form of a drink or smoked' is common during the Hindu festivals of Holi and Mahashivaratri.

\n

\n\n

What are its medicinal qualities?

\n\n

\n

- There has been no rigorous scientific testing of the medicinal properties of cannabis due to restrictive laws.

\n

- There is considerable evidence though, supporting its use in the treatment of chemotherapy - induced nausea and vomiting, neuropathic pain, and multiple sclerosis.

\n

- Lower levels of evidence support its use for AIDS, wasting syndrome, epilepsy, rheumatoid arthritis, and glaucoma.

\n

\n\n

What is its legal status?

\n\n

\n

- The possession, use, and sale of cannabis are illegal in most countries as a result of an agreement in the 'International Opium Convention' (1925).

\n

- Indian government banned the use of cannabis by passing the Narcotic Drugs and Psychotropic Substances Act-1985.

\n

- The rigour of restrictive laws & its implementation varies greatly across countries.

\n

- Canada, Belgium, Australia, the Netherlands, Spain, and several U.S. states are some territories where medical use of cannabis is legal.

\n

- Netherlands (1976) & some US states (recently) have allowed for the

recreational use of marijuana.

\n

\n\n

What do the doctors say?

\n\n

\n

- The opinion among medical practitioners in India is divided.
- Some are of the opinion that, it is a better alternative to alcohol & tobacco consumption.
- While supporters claim that denying medical use of marijuana is a violation of 'Right to life', others believe it is not all that important a drug for Palliative Care.
- Most doctors advocate caution, as a wrongly worded policy could potentially aggravate substance abuse among youngsters.
