

# Making fuel affordable

#### What is the issue?

 $n\n$ 

\n

• Petro and diesel prices are increasing to a record high, despite the falling international crude oil prices.

\n

• The recent 'daily price revision' policy introduced by the government is also not benefitting the consumers.

\n

 $\bullet$  It calls for the government to pay attention to the factors behind this and take measures to make petrol and diesel affordable to its consumers. \n

 $n\n$ 

### What is daily price revision policy?

 $n\n$ 

\n

- $\bullet$  Under this, the retail selling prices of petrol and diesel is revised daily based on average international price and the currency exchange rate. \n
- $\bullet$  Government argued that this would pass on the benefit of fall in international prices to the end consumers. \n
- However, prices of petrol and diesel have only been going up, despite the introduction of the dynamic fuel pricing.

 $n\$ 

## What are the reasons for this anomaly?

 $n\n$ 

\n

• **Taxes** - The favourable impact that dynamic fuel pricing makes, is outweighed by the impact of taxes levied by the government.

- The central excise duty on petrol shot up by 127 percent and that on diesel by 387 percent in the last two years.
- $\bullet$  In addition to this, there are other state levies that add up to the fuel bill.  $\mbox{\ensuremath{^{\mbox{\sc h}}}}$
- Notably, about half the price paid by the Indian end-consumer for petrol goes towards paying these taxes.
- **GST** The recently introduced GST also did not cover the petroleum products and so prices vary at locations depending on the applicable state taxes.

\n

- The goods and services tax (GST), even at its highest slab of 28%, would substantially lower the current tax burden on fuels, if covered.
- **Price deregulation** Traditionally, fuel prices were determined on a costplus basis, which led domestic prices to fall in line with the cost of inputs like crude oil.

۱n

• However, petrol and diesel pricing were deregulated in 2010 and 2014 respectively.

\n

• This caused the fuel prices to be determined primarily by the forces of supply and demand rather than input costs.

 $n\n$ 

#### How does the future look?

 $n\n$ 

\n

• The signs of an increase in international crude oil prices have started to set in.

\n

- $\bullet$  However, there are no signs of the government cutting down the taxes. \n
- $\bullet$  If petrol and diesel are to be affordable to end-consumers, the government must step in and introduce measures to lower the prices. \n
