

## Missile Panic in Hawaii

### What is the issue?

\n\n

\n

- Hawaii has re-introduced Cold War-era sirens and also has text and email warning systems for ensuring the safety of its residents.

\n

- But recently, Hawaii residents received a text message, which falsely stated a ballistic missile threat and asked them to seek shelter immediately.

\n

- This erratic mistake could prove costly and requires scrutiny.

\n

\n\n

### What just happened?

\n\n

\n

- The text declaring emergency was apparently sent by mistake by an employee at Hawaii's "Emergency Management Agency".

\n

- While the incorrect alert was corrected by email 18 minutes later, for the next 38 minutes, there was no follow-up phone text correction.

\n

- Notably, Hawaii is only 4,661 miles from North Korea, which is well within the 6,000 miles range of the Korea's Hwasong 14 missile.

\n

- While after trigger, the missile will take 20 minutes to reach Hawaii, the pacific command would take 5 minutes to react.

\n

- This effectively leaves residents with just 15 minutes to seek shelter and hence the emergency call caused immense panic.

\n

- Also, as many felt that it was the end of their lives, they tried calling their loved ones, and telephone services too got jammed briefly.

\n

- Most rushed to basement shelters but some decided they'd rather die looking at Hawaii's famed sea beaches.

\n

\n\n

## What was the official response?

\n\n

\n

- **Government** - Across ranks, government officials apologised for the mess-up and even a federal investigation was commissioned.

\n

- Officials have also started working on a 'cancellation template' for sending corrections faster to mobile phones.

\n

- Notably, Since the Japanese attack on Pearl Harbour during the WW-II, Hawaii feels impending attacks sharply.

\n

- **Nuclear experts** - They've stressed that a mistaken message could possibly start an unintended nuclear war.

\n

- This is because the enemy could perceive that the fuss is a cover-up for an offensive strike and hence triggers his "first-strike stability" for deterrence.

\n

- They've hence called for a strong calculated review of the current mess up.
