

Moving ahead with bank resolution

What is the issue?

\n\n

\n

- The Insolvency and Bankruptcy Code (IBC) and the Indradhanush scheme are rolled out by the government.

\n

- However, the slow pace of its progress in resolving stressed banks is getting to be a cause of concern.

\n

\n\n

What are the government initiatives in this regard?

\n\n

\n

- The **IBC, 2016** is the bankruptcy law of India which seeks to consolidate the existing framework by creating a single law for insolvency and bankruptcy.

\n

- This is to deal with insolvency resolution processes for individuals, companies and partnership firms.

\n

- **Indradhanush plan** is a seven pronged plan to revamp the functioning of public sector banks.

\n

- The seven elements include appointments, board of bureau, capitalisation, de-stressing, empowerment, framework of accountability and governance reforms.

\n

- The recent **Alternative Mechanism** is a framework to speed up the mergers of public sector banks.

\n

\n\n

What issues are to be addressed?

\n\n

\n

- **Insolvency applications** - Banks should come forward and file insolvency applications under the IBC, on their own without waiting for regulatory directions from the RBI.

\n

- This “pre-default” stage out-of-court restructuring, with very first signs of initial stress can make resolution process faster and simpler.

\n

- **Higher Provisions** - Banks should also comply with RBI directions to make higher provisions for accounts to be referred under the IBC.

\n

- A provision is an amount that is put aside in an account to cover a future liability.

\n

- Higher provisions could ensure that banks are fully protected against likely losses in the resolution process.

\n

- **Balance sheets** - There is a need for a more concrete plan for public sector bank balance sheets.

\n

- This is essential to ensure that banks withstand the losses during resolution.

\n

- And also to have enough capital buffers to intermediate well the huge proportion of economy’s savings that they receive as deposits.

\n

- **Capital infusion** There is a considerable need for substantial additional capital infusion into public sector banks by the government.

\n

- This is essential given the scale of NPAs and lower internal capital augmentation of public sector banks.

\n

\n\n

What lies ahead?

\n\n

\n

- The government has come up with various options for resolving issues like stressed assets, inefficient banks, balance sheet problem, etc.

\n

- However, the developments hint at a need for all these to work together to make a substantial progress in the resolution process.

\n

- Government should address the massive recapitalisation need of banks and

soon publicly announce a feasible plan in this regard.

\n

- This is crucial to provide clarity to investors and restore confidence in the markets about the banking system.
